BRITISH COLUMBIA

PUBLIC ACCOUNTS

FOR THE

FISCAL YEAR ENDED 31ST MARCH, 1921

PERIOD FROM 1ST APRIL, 1920, TO 31ST MARCH, 1921

PRINTED BY
AUTHORITY OF THE LEGISLATIVE ASSEMBLY.

VICTORIA, B.C.:
Printed by WILLIAM H. CULLIN, Printer to the King's Most Excellent Majesty.
1921.

To His Honour WALTER CAMERON NICHOL,

Lieutenant-Governor of the Province of British Columbia.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present the Public Accounts of British Columbia for the fiscal year ended 31st March, 1921.

All of which is respectfully submitted.

JOHN HART,

Minister of Finance.

Treasury Department,

Victoria, 20th July, 1921.

VICTORIA, B.C.,

20th July, 1921.

The Honourable John Hart,

Minister of Finance.

SIR,—I have the honour to submit herewith the Public Accounts of the Province of British Columbia for the fiscal year ended 31st March, 1921.

I have the honour to be,

Sir,

Your obedient servant,

A. N. MOUAT, C.A.,

Comptroller-General.

"The form of the accounts should bring to light extravagance and inefficiency, and enable criticism to be usefully applied."

ORDER OF PUBLIC ACCOUNTS.

PAGE.

PROVINCIAL BOARD OF HEALTH,

VICTORIA, B.C., June 30th, 1921.

To His Honour WALTER CAMERON NICHOL,

Lieutenant-Governor of the Province of British Columbia.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present the Report of the Provincial Board of Health for the year ending June 30th, 1921.

J. D. MACLEAN,

Provincial Secretary.

REPORT *of the*
PROVINCIAL BOARD OF HEALTH.

PROVINCIAL BOARD OF HEALTH,
VICTORIA, B.C., July 31st, 1921.

Doctor the Honourable J. D. MacLean,
Provincial Secretary, Victoria, B.C.

SIR,—I have the honour to submit the Twenty-fifth Annual Report of the Provincial Board of Health.

In submitting my report on health matters for the year 1916, I said:—

"The problems that present themselves to the Board of Health from year to year vary only in degree. The importance to the community at large of health problems in general is beginning to be more recognized by those particularly affected, and that is by the average citizen.

"The changes as regards the management of health problems that have taken place during the past few decades are the result of experience gained as our knowledge of conditions increased. These changes of our treatment of these cases may be summarized by dividing Health Board activities into periods:—

"The first period was that of general sanitation, when the departments were chiefly concerned with water-supplies, sewage-disposal, street-cleaning, etc.

"The second period of quarantine enforcement.

"The third period of applied bacteriology. This period showed the beginning of the work in the prevention of disease.

"The fourth period was that of social analysis of disease, chiefly concerned with the congested masses of poverty-stricken humanity.

"Consideration of these aspects of health-work naturally led to the next period, that of personal hygiene and education, and which is now only beginning. The foundation of this latest phase of Health Department work is the idea of the prevention of disease as distinctive from its cure. With the emphasis placed more on the preservation of health and less on the cure of disease, the public is coming to realize how essential to health is 'the futility of treating the disease and tolerating the cause.'

"We have endeavoured to show in these reports that the Health Board is appreciative of the changes that have taken place in regard to the management of health matters. The essential change is this, and I am quoting from the 'New Public Health,' by Dr. Hill, Medical Health Officer of London, Ontario, in which he says: 'The old public health was concerned with the environment, the new is concerned with the individual; the old sought the sources of infectious diseases in the surroundings of man, the new finds them in man himself.'"

What we hoped for in 1916 was for the opportunity to present our problems to the public in such a way that they would recognize their practical application to every-day life, and we have made progress that, while the results are not spectacular, yet they are such as to assure us that the foundation has been laid which will bring within appreciable reach the goal for which we are striving.

The awakening of the public conscience and securing the encouragement of an intelligent public opinion to bring about through the practical application of our health laws the increased length of life, increased productive capacity of the human asset, decreased sickness and misery, and bring about the culmination of national prosperity produced by happy, healthy, contented people.

The different recommendations that have been made to yourself during the past five years have received very careful consideration, and your Department desires to express its appreciation of the encouragement and practical help that we have received in carrying out such recommendations as you approved of.

Besides the general work of your Board, which has increased very rapidly, particular effort has been given to the work outlined to you as regards Child Hygiene, Public Health Nursing, and the development of the venereal treatment branch of the Board. I will deal with these as follows:—

(*a.*) *Child Hygiene.*—Child-hygiene work has been carried on throughout the Dominion of Canada in a sporadic manner, and those more especially interested realized that concerted action was necessary in order that the work might be standardized and a general scheme adopted for application in all parts of the Dominion.

The Canadian Public Health Association was the first to move in this direction, and as a result of their suggestion a conference was held of representatives of all of the voluntary organizations in Canada, resulting in the formation of the Canadian National Child Welfare Association.

Briefly, the plan is that this association shall act as the parent body; that each Province will form a Provincial organization, and the work in the Province will be managed locally.

A child-hygiene organization was formed in British Columbia, not with the idea of starting a new activity, but with the idea of utilizing the services of the voluntary organizations already organized, and who had been showing interest in this work.

The Women's Institutes and the I.O.D.E. of British Columbia had been devoting some attention to the work, but other than an occasional Baby Show had not been able to bring about concerted action. On an appeal being made to the Women's Institutes, health committees were formed and the Department has secured the active support of members who have toured different sections of the Province in order to stimulate the work along these lines.

British Columbia was the first Province in Canada to adopt compulsory medical examination of school-children, but no provision had been made for prenatal work and care of the child after birth until they reach school age.

The present organization is actively engaged in this work. The Provincial Board is supplying all the literature necessary, keeping in touch with the central organization, and utilizing the services of the Public Health Nurses who are being placed in the field for carrying on this work. A comprehensive scheme for teaching the health principles to the school-children has been adopted and will be shortly incorporated in the schools with the assistance of the local women's organizations.

The registration of births is compulsory, but registration of pregnancy has not yet been adopted, but through the voluntary organizations we are trying to work up the scheme of voluntary registration of pregnancy. Names and addresses of expectant mothers are forwarded to the Department and a series of letters go to them containing all necessary advice as to the prenatal care. This idea has been received with a great deal of favour. The Public Health Nurse is instructed to concentrate on child-hygiene work, working in conjunction with the Medical Inspector, using the Medical Inspector's records of his examinations as an introduction to the home. The reports that we receive show that the public are in a receptive mood, and the results are showing clearly that with patient and careful education of the public a successful issue is assured.

The infant-mortality figures for the Province as a whole have been higher than they should be, but, as against this, in our large cities of Victoria and Vancouver we have the lowest death-rate under one year of any cities in the Dominion. There has been a steady decline during the past few years in Victoria and Vancouver, which, in our opinion, is largely due to the persistent work of the Health Department assisted by the voluntary organizations.

The legislation provided by the Government is sufficient for all immediate needs, and will bring about the desired results if the departments concerned and the voluntary organizations will continue along the lines of educating the public. There must be an intelligent public opinion back of any legislation.

(*b.*) *Public-health Nursing.*—Two years ago the plans of the Government in regard to Public Health Nurses were given effect to and a beginning made by the establishment of a single Public Health Nurse.

The Government had made provision for the examination of the school-children, but it was found that, while this was carried out and was bringing about good results, as testified to by parents, teachers, and medical men, yet a great many children who should receive care and treatment were neglected for various reasons by the parents, and it was very strongly brought home to us that unless we had what is known as follow-up work we could not bring about the results that we desired.

The University of British Columbia established a Faculty of Nursing and in connection with this was established a Chair of Public-health Nursing, endowed by the Red Cross Society. It

was found to be absolutely necessary to have this training for the nurses if we were to be able to send out nurses understanding what public-health nursing means, and what prevention of disease really means.

The Red Cross, in carrying out their peace-time programme, assisted the Department by contributing to the support of the nurses until such time as the Government could make provision to carry on the work. The Government recognized the fact that public-health nursing, if the principle was once understood by the public, would be established in all parts of the Province, not as a charity, but as a self-supporting institution.

In order to give the people the opportunity of employing nurses in connection with the schools, an amendment to the "Public Schools Act" was passed which allowed the Boards of School Trustees to employ nurses on the same basis as they employ teachers, receiving from the Government the same financial assistance as they receive for their teachers.

Since the first nurse was sent out two years ago there have been fifteen nurses placed in the field. The idea is a new one to the people. Assistance is given to the district in some instances by the Red Cross and in others by the Government, and the Government, supplementing their amendment to the "Public Schools Act" placed in the Estimates for the Provincial Board of Health the sum of $12,000 to carry on this work, and our experience has been that once the nurse has been some months in the district there is no doubt as to the future. The people, once they understand the idea, have asisted in every way they can, and the requests are not to remove the nurse, but to send an additional nurse.

During the present year, on the first opportunity presenting, four of the districts have voted to employ a Public Health Nurse as school nurse, and the Department has allowed the grouping of schools in order that the proportion of the salary paid by the taxpayers may be spread over four, five, or six schools, and in this way make a very small addition to the taxes.

The child-hygiene work, while being a distinct work, yet is interwoven in its application with the public-health nursing, and particular directions are given to the nurses to emphasize this work.

The medical profession is co-operating and the Public Health Nurses are endeavouring to establish clinics at their headquarters where defects in the school-children can be remedied, and a particular effort is being made to deal with the dental question.

Reports from our Medical Inspectors show an appalling condition of affairs. In two of the centres dental clinics have been established. Representations have been made to the dentists, who have met the Department in a splendid way, and it is hoped to be able to work out a practical scheme whereby the dental needs, especially in the outlying districts, will be met.

(*c.*) *Venereal Disease.*—The Legislature passed in 1919 "An Act for the Suppression of Venereal Diseases," which was brought into effect in March, 1920.

The venereal-disease problem, being one not peculiar to one locality, representations to the Federal Department of Health by the Provincial Boards of Health resulted in the recognition of the fact that these diseases must be treated as a nation-wide affliction, and a standard plan was adopted providing for the establishment of clinics for free treatment, the formation of local organizations in order to have a medium whereby the public might be reached, and an educational propaganda conducted. The Dominion Department of Health, recognizing the national aspect of the question, agreed to provide a certain amount of financial assistance in the establishing of the clinics and the carrying-out of the educational propaganda.

The Government of British Columbia recognized the fact that it would be unwise to create public sentiment or carry on educational work until facilities for the treatment had been provided, and two clinics were established, one in Vancouver and one in Victoria. These were placed under the charge of experts, provided with all the facilities to carry out the treatment, and almost immediately the work was recognized by the public as a necessity and the attendance of patients began to grow.

The Government makes provision for free expert opinion, free treatment, free medicines (which is an expensive item), and free laboratory service.

In regard to the laboratory services, subsidies were paid by the Government to the laboratories of the Vancouver General Hospital and the Jubilee Hospital, amounting to $8,000 annually, to provide free laboratory services in connection with the venereal work, but the Government went farther and have provided free laboratory services for the medical profession in all matters in connection with public-health work. Not only is free treatment provided in the clinics, but

the Act requires that all medical men shall report venereal cases by number, not by name, secrecy being preserved, and they are entitled to free medicines for their private patients, also free laboratory services.

The beginning of this year, after the establishment of the facilities, it was deemed advisable to begin an educational campaign. A Provincial organization has been formed and leading citizens, recognizing the economic aspect of the question, have given their services voluntarily, and series of meetings are being held, literature is being distributed which is provided by the Department, and a decided impetus has been given to the work.

On Vancouver Island meetings have been held in the City of Victoria, voluntary organizations have been addressed, and twenty-seven points on the Island have been reached by our speakers.

Voluntary organizations have been formed on the Mainland, but the work has been more confined to Vancouver, although local organizations are being formed at various points.

It is the intention of the Department to establish clinics at one or two central points in the Interior, and active steps have already been taken in regard to the establishment of a clinic at Kamloops.

The work of the clinics has increased and it has been found necessary in Vancouver to double the accommodation. Active measures are being taken to follow up the work in order that patients may continue their treatment. Arrangements are carried out whereby patients leaving the Province can continue treatment in other clinics, and when any patient comes from other Provinces to us we are notified by the clinic at which they have been treating of the British Columbia address, and they are immediately looked after.

The medical profession does not as yet appreciate the value of the work that we are doing and has not given that co-operation which is absolutely essential if the Dominion-wide plan of the health authorities is to be carried out.

The small expenditure for this work should not be criticized when it is remembered that 12 per cent. of all hospital patients are in the hospital as a result of venereal disease; 25 per cent. of our patients in the asylum are there as a result of the same affection, and if the taxpayers would realize that the cost of these patients in the asylum will in eight years amount to $500,000 cash outlay they will appreciate the fact that the small expenditure to provide prevention is a sound business investment.

The great increase in the work of the Department itself shows the awakening of public opinion, and our activities have been directed along the lines of stimulating this awakening, as we have recognized that the Government or the Department cannot do much unless there is an intelligent and insistent demand on the part of the public for the enforcement of the laws of British Columbia in regard to health.

Infectious Diseases.—During the past year the reports of infectious diseases have shown a marked decrease as regards smallpox, diphtheria, chicken-pox, whooping-cough, and measles. There was an increase in the number of typhoid cases reported amounting to fifty, due to the outbreak in three lumber camps situated at widely separate points in the Province. These three camps accounted for thirty-four of the increase. A strict examination was made and in each of these cases the cause was from the presence of carriers in the kitchens. The occurrence of typhoid fever in British Columbia shows a most satisfactory decline during the past ten years, dropping by gradual degrees from 102 deaths in 1910 to nine in 1920. For the year July 1st, 1920, to June 30th, 1921, there have been twenty deaths, the increase being due to the attacks mentioned above.

Smallpox and chicken-pox, of which there were reported last year 576 smallpox and 1,036 chicken-pox, have dropped this year to 137 smallpox and 802 chicken-pox.

A table of infectious diseases reported during the year is incorporated in this report, in addition to which epidemics were reported as follows:—

Chicken-pox—Smithers, Creston, Chilliwack, Trail, Kelowna, Ashcroft, Sooke District, and Oak Bay.

Measles—Crowsnest, Duncan, Lucerne, Chilliwack, Saanich, Crofton, Port Alice, Kamloops, Trail District, Kelowna, Powell River, Cranbrook, Greenwood, and New Bella Bella.

Mumps—Nelson, Ocean Falls, Kamloops, Kelowna, Cranbrook, and Port Coquitlam.

Whooping-cough—Ocean Falls, Trail District, Alberni, and Greenwood.

Vaccination has been recommended and pushed as much as possible. Unfortunately, there is a very active and clamorous minority trying in every way to thwart the efforts of the Board in regard to vaccination.

The decrease in the number of deaths and the increase in the number of births noted last year has continued, and the figures are set forth in the report of the Vital Statistics Branch, which accompanies this report.

The reports of the Sanitary Inspector and the Travelling Health Officer, also the report of the Medical Inspection of Schools, are appended.

The work done in the Sanitary Inspection Department has been of a most satisfactory character. Our Chief Sanitary Inspector, Mr. DeGrey, has been unremitting in attention to his duties, and with the careful and thorough co-operation of the Provincial Police the complaints in regard to the insanitary conditions in the camps are becoming less and less. In addition to the work throughout the camps, the Sanitary Department has in constant use the launch "Sanita," visiting the numerous camps situated along our extensive sea-coast, and particular attention is being given to the sanitation of the summer resorts. These are growing in number and increasing in size and particular attention has been given to laying the basis for their future sanitary care.

The following vaccines and serums have been sent out from the Board during the past year: Smallpox vaccine, 4,450 points; typhoid vaccine, 665 doses; diphtheria antitoxin, 893,000 units; tetanus serum, 61,500 units.

Cemeteries approved: Cortes Island, Vancouver (located in South Vancouver), Chilko, and Francois Lake.

Water-supplies approved: Prince George Extension, West Summerland Extension, Rossland Extension, Burnaby, Coquitlam Extension, Cassidy, Anyox, and Sidney.

Special health district created: Fernie.

Sewerage approved: Anyox, Rossland Extension, Ioco, and Powell River.

The advances made in our work have been very gratifying, and we are confident that during the coming year the extensions in the new departments which have been created will more than meet with our expectations.

The women's organizations of the Province have been especially active, and more so as regards the Women's Institutes are they turning their attention to the social questions. Their requests in regard to legislation have met with the hearty sympathy of the Government, and they are now realizing that their chief efforts should be directed to creating an intelligent public opinion which will ensure the enforcement of the Acts at present on the statute-books.

The work of the Department has increased materially during the past year, but this increase has been well handled by our present staff, and I would desire to take this opportunity of expressing my appreciation of the hearty co-operation which I have received from them.

To the encouragement which you, as Minister of the Department, have given us much of our success is due.

I have the honour to be,
Sir,
Your obedient servant,
H. E. YOUNG,
Provincial Officer of Health.

GENERAL REPORTS.

SANITARY INSPECTION.

SANITARY INSPECTOR'S OFFICE,
VICTORIA, B.C., July 31st, 1921.

H. E. Young, M.D., C.M., LL.D.,
Provincial Officer of Health, Victoria, B.C.

SIR,—I have the honour to submit for your consideration my Eleventh Annual Report on Sanitary and Quarantine Work for the Provincial Board of Health.

The outstanding feature of this branch of your Department is the inspection of logging, mining, and industrial plants located in unorganized territory and chiefly along the vast coast-line of British Columbia.

Years of sanitary-welfare propaganda by departmental regulations, inspections, and an occasional Court scene, coupled with the co-operation of 80 per cent. of operators and employees, have brought about such improvements in British Columbia's industrial camp or community life that it has been referred to in very complimentary terms by industrial-welfare leaders and press in many parts of this continent; even the rabid industrial "grouch" admits that British Columbia is a leader for good sanitary conditions.

But we are by no means so satisfied as to rest on our oars of prophylactic effort. With the valuable aid of our Provincial Police officers the work continues, and the progress of this far last West keeps abreast of the world unhampered by any serious infectious outbreaks affecting public health.

The drainage and sewerage of some of our large industrial centres and Interior cities have engaged our serious attention during the past year with much success. Careful observation of sewage-disposal plants at several of our growing cities indicate the necessity of serious attention along expansive lines in order to take care of increasing population. I would respectfully suggest that many of our progressive municipal bodies be reminded of this growing though unseen and usually unthought-of necessity and yet important factor in their future growth.

Less than a decade ago the septic tank was hailed as the cure-all in sanitary circles; its adoption and almost general use brought in its trail abuse and condemnation. Eighty per cent. of the trouble was the result of faulty construction and installation, 10 per cent. by improper proportions, and the balance through lack of attention. For isolated or camp use there is no question as to the value of a septic system, and in towns it is practical, provided it is designed and installed correctly. It should be remembered that a septic tank is a sewage-disposal plant and not intended to take care of grease, lye, or other chemical agents.

This branch of your Department has been called upon many times to examine and report on defective heating, ventilating, and sanitary conveniences of some of our public schools. Many glaring examples of costly mistakes and unnatural methods along those lines have been exposed. It is not a pleasant duty to find fault with work or goods accepted as O.K. by well-meaning and good-intentioned public bodies (mostly honorary), and in order to protect them from an aftermath of criticisms, and also the health of our future citizens, I beg to suggest that some means be taken by the Honourable the Minister of Education that no Government aid be accorded to any proposed school or public building unless the plans and specifications have been approved by the Provincial Board of Health.

The matter of improved drainage for many of our unincorporated towns cannot with safety be longer deferred. May I suggest that this problem in its angles of responsibility be taken up with the Honourable the Minister of Public Works.

WATERSHED PROTECTION.

This important branch of our work has been cared for with gratifying results, and two-thirds of our population have been protected from water-borne disease through the thorough yet silent enforcement of our watershed regulations. Logging and mineral development upon the larger watersheds adjacent to Greater Vancouver will necessitate increased vigilance, and this growing responsibility demands our most serious and immediate consideration. Some slight amendments

are now being drafted to meet changing conditions. The installation of chlorination plants for some of our water-reservoirs should engage the attention of our Municipal Health Boards if the enviable high standard of British Columbia's drinking-water is to be maintained.

What threatened to be a serious infectious epidemic at one of our important coastal industrial plants was effectively controlled almost at its starting-point and was stamped out. This was accomplished through the prompt reporting of first case and the availability of our own quarantine launch, which was placed in commission immediately with highly satisfactory results.

NUISANCES.

Nuisances resulting from increasing industrial development of our fisheries and chemical resources have demanded our attention. In many instances well-meaning public boards in their endeavours to encourage industries have overlooked the probable aftermath of smoke, soot, odours, and befouling of foreshore. Efforts made to abate these undesirable evils present many difficult problems, all of which would be greatly minimized if a well-isolated location had been chosen for the site of the works.

Experiments along the line of condensation are being made at several oil and guano factories and the results are being noted for future reference and action.

One of the most difficult angles of our work at this time is the sanitary supervision of our numerously growing summer resorts. Many of our summer camps select their temporary outdoor abode at the most convenient foreshore, regardless of legal rights or sanitary conveniences and often without ascertaining the quality or volume of drinking-water available. Frequent visits are made to all such places, advice given, notices posted, and the carrying-out of the sanitary regulations insisted upon.

Very little difficulty is experienced at those places which promise to be permanent, but in the immediate vicinity of the cities where there is great competition in the effort to secure a site where a tent may be pitched drastic measures will have to be adopted to enforce the sanitary regulations.

I have, etc.,
FRANK DEGREY,
Chief Sanitary Inspector.

TRAVELLING HEALTH OFFICER'S REPORT.

VICTORIA, B.C., July 31st, 1921.

H. E. Young, M.D., C.M., LL.D.,
Provincial Officer of Health, Victoria, B.C.

SIR,—I beg leave to submit the following summary of the public-health and sanitary work done by me from April 1st, 1920, to March 31st, 1921:—

April 2nd, 1920. Left Kamloops for Prince George to inspect camps about which complaints had been made.

April 6th. Inspected two camps at Langworth.

April 7th. Inspected mill camp of U.G.G. at Hutton.

April 9th. Inspected camp of L. A. Johnson, Rausch Valley.

April 10th. Inspected school premises at McBride and a small mill camp.

April 12th. Inspected sanitary conditions of school premises in Miller Addition, Prince George.

April 14th. Inspected school premises at Vanderhoof.

April 19th. Sought cause of typhoid cases occurring in Terrace some two months ago. Found pollution of stream by one Viger. Inspected three mill camps at Usk.

April 20th. Inspected mill camp at Pitman Spur and mill camp of Kitsumgallum Lumber Co. at Remo.

April 21st. Inspected mill and logging camps of Lakelse Lumber Co. and Geo. Littler Mill camp at Terrace.

April 22nd. Inspected school premises at Terrace.

April 25th. Inspected sanitary condition of Stewart.

April 28th. Inspected two mill camps at Port Clements and sanitary condition of the village. Also mill camp of Masset Timber Co. (1919), Ltd.

April 29th. Inspected two logging camps of Masset Timber Co. (1919), Ltd.

May 3rd. Inspected sanitary condition of Granby Co.'s camp at Anyox. Also conditions at Alice Arm.

May 25th. Inspected sanitary condition of Ocean Falls.

June 2nd. Inspected camp of Northern Construction Co. at Williams Lake.

June 3rd. Inspected two camps at Deep Creek.

June 4th. Inspected Camps 6, 8, and 9 of Murdock & Co.

June 5th. Inspected Camps 1, 2, 3, and 4 of Murdock & Co.

July 8th. Inspected site of proposed slaughter-house at Palmer, Esquimalt & Nanaimo Railway.

July 17th. Visited smallpox patients at Salmon Arm.

July 19th. Spent day on Okanagan Indian Reserve seeing cases recovering from smallpox.

July 22nd. Inspected two slaughter-houses in vicinity of Princeton.

August 8th. Examined sanitary condition of summer camp at Fish Lake.

August 18th and 19th. Inspected and reported upon sanitary conditions at Shawnigan Lake.

August 25th. Visited Baskin's mill camp on Porcupine Creek and gave instructions for building camp in conformity with the Health Regulations.

September 9th. At request of and in company of Dr. Corsan, of Fernie, visited mill camp of the White Spruce Lumber Co., and condemned existing source of water-supply.

September 11th. Inspected, at request of Dr. Weldon, local Officer of Health, and reported upon sanitary conditions at Michel and Natal.

September 17th. Inspected camp of O.I. & M. Lumber Co. on Boulder Creek, where some twelve cases of typhoid fever had developed during last two weeks.

September 24th. Visited and inquired into conditions of sufferers by forest fire on North Thompson River.

September 25th to 28th. Examined Tranquille Creek for possible source of typhoid infection.

November 3rd. At request of Constable Carr, inspected sanitary conditions at Burns Lake and visited slaughter-house in course of construction, and gave him instructions as to disposal of drainage therefrom.

November 6th. Inspected condition of main drain ditch at Smithers.

November 25th. Inspected camp of Whalen Pulp & Paper Co. at Swanson Bay.

December 18th. Inspected sanitary conditions of Indian reserve at North Vancouver.

January 4th to 23rd, 1921. Arrived at Terrace in connection with outbreak of typhoid fever. No physician resident in Terrace. Seven or eight cases had been sent to hospital before my arrival. Two patients had died. Later I sent two suspected cases, both of which proved to be severe cases of typhoid. Both recovered. Found case of smallpox in man aged 69, which had been thought to be chicken-pox, but he had been isolated. I remained at Terrace until he could be discharged. During my stay I acted as resident physician, treating all cases that presented themselves.

February 23rd. Examined school-children of Notch Hill who were suspected of having had scarlet fever.

March 5th. Examined outlet of septic tanks of Princeton Hotel and recommended carrying outlet-pipe to present channel of Tulameen River.

During the above period no serious outbreaks of infectious or contagious diseases occurred. Of those that came under my notice, the most severe were an outbreak of typhoid fever in a lumber camp on Boulder Creek, West Kootenay, in September, in which there were twelve or thirteen cases and one or two deaths, and another at Terrace in December, in which there were ten or eleven cases with two deaths. The source of infection was not definitely traced in either outbreak, but both died out quickly when proper protection of water and food supplies was instituted.

Again I wish to express my appreciation of the willing and efficient assistance given me by the Provincial Police whenever I have needed it.

I have, etc.,

E. C. ARTHUR,

Travelling Health Officer.

MEDICAL INSPECTION OF SCHOOLS.

PROVINCIAL BOARD OF HEALTH,
VICTORIA, B.C., July 31st, 1921.

Doctor the Honourable J. D. MacLean,
Provincial Secretary, Victoria, B.C.

SIR,—I beg leave to submit the Tenth Annual Report of the Medical Inspection of Schools for the Province of British Columbia.

In looking over past reports I find suggestions made as to the extension of the medical inspection of schools work, pointing out the difficulties which were presenting themselves and suggesting an extension of the policy which would provide remedies.

In 1918 I suggested the extension of the work by the appointment of qualified nurses to look after cases and also to follow up the work of the examination.

The examination of the Medical Inspectors had been carried out in a very satisfactory manner, but the one defect under the "Medical Inspection of Schools Act" was that the physician who made the examination was debarred from attending the case, and was obliged to be satisfied with a notice to the parents of the defects that were found at the examination of the pupil. The result was that, while the defects might be recognized and the parents' attention called to them, they did not realize the necessity of having the defects remedied, with the result that the children did not receive the necessary attention, and so the effect of the work was nullified. It was for this reason that I made the suggestion for the extension of the work by the appointment of qualified nurses.

The year following I was pleased to report that a beginning had been made in this respect, and that you had announced the policy of the Government to the effect that the Provincial Board of Health would be empowered to employ public-health nurses in order to act as a medium between the physicians and the parents. Nurses trained in public-health work could explain to the parents any of the defects discovered by the doctor and also point out the evil effect of neglect.

The University of British Columbia has established a public-health course for nurses, the chair of which was endowed by the Provincial Branch of the Red Cross.

In 1920 the first class graduated, and we have at present fifteen nurses in the field. Another class is undergoing training, numbering about twenty, and we will be able to place all of these nurses. The Women's Institutes as a voluntary organization have come up to our expectations in their efforts to co-operate with the Department.

The public-health nurses are instructed to make the school-inspection work the important part of their duties, and not only are they carrying this out, but they are beginning to form in the schools health classes where the rules of health are taught to the children in such a form as to ensure their interest and to stimulate their participation in the carrying-out of the standard rules of health.

The Women's Institutes have formed health committees, and not only is the care of the school-child looked after, but the programme of child-hygiene begins with prenatal care and continues through the child's life until he leaves school.

We have made substantial progress during the past three years owing to the great awakening of public conscience in health matters, and now enforcement of the Act is backed by intelligent public opinion.

There may, and probably will, be set-backs peculiar to the inauguration of new work, but we look for a very much more rapid progress on account of the fact that the women's organizations are taking such interest.

We have made progress, but it has been slow. At times it was disappointing, but we can look back and see we have made a good foundation, and our previous work has not been in vain. Our school population is increasing rapidly, and unfortunately, owing to financial stringency, there has been a reluctance on the part of the people to incur the expenditure necessary to provide increased accommodation. This will result in makeshifts in regard to seating capacity, and especially so in regard to the sanitary conditions of the schools. The Department is keeping very close watch, and where gross defects are reported the Board of School Trustees affected are immediately communicated with.

They are evincing an earnest desire to meet the provisions of the necessary requirements, and with the improvement of economic conditions will build so as to keep pace with the great increase in population.

This year we have examined 12,400 more pupils than in 1919.

I wish to express my great appreciation of the interest taken and the assistance rendered by the Women's Institutes. Their organization is beginning to be a great power in the land and they are more and more evincing interest in everything pertaining to the home and children.

The reports from the medical men have been, during this past year, the most satisfactory the Department has ever received.

I am submitting a detailed report of the schools examined.

I have, etc.,
H. E. Young,
Provincial Officer of Health.

SCHOOLS INSPECTED.

Medical Inspectors: 154.
Reports from Medical Inspectors: 128.

High Schools.

High schools. 1919–20, 45: Reported, 19. 1920–21, 52: Reported, 30.
Pupils inspected: 1919–20, 2,020; 1920–21, 3,049, an increase of 1,029.

Graded City Schools.

Cities, 35. 1919–20: Reported, 23; not reported, 12. 1920–21: Reported, 25; not reported, 10.
Pupils inspected: 1919–20, 27,278; 1920–21, 32,392, an increase of 5,114.

Rural Municipal Schools.

Municipalities, 27. 1919–20: Reported, 20; not reported, 7. 1920–21: Reported, 21; not reported, 6.
Pupils inspected: 1919–20, 13,154; 1920–21, 18,159, an increase of 5,005.

Rural and Assisted Schoools.

Schools inspected: 1919–20, 442, at a cost of $7,041.50. 1920–21, 438, at a cost of $9,574.25.
Schools not inspected: 1919–20, 108; 1920–21, 169.
Pupils inspected: 1919–20, 9,955; 1920–21, 11,231, an increase of 1,276.
Cost of inspection per pupil: 1919–20, 71 cents; 1920–21, 85 cents.
Percentage of defects: 1919–20, 91.52; 1920–21, 93.98, an increase of 2.46.

REGISTRAR'S REPORT UNDER THE VITAL STATISTICS ACT.

H. E. Young, Esq., M.D., C.M., LL.D.,
Secretary, Provincial Board of Health, Victoria, B.C.

VICTORIA, B.C., July 31st, 1921.

SIR,—I have the honour to submit the Forty-ninth Report of Vital Statistics for the year commencing July 1st, 1920, and ending June 30th, 1921.

POPULATION.

As the official figures for the Dominion census are not available at the time this report is being compiled, it has been decided, as has been the practice in recent years, to again base our estimate of the population mainly upon the number of children enrolled in the public schools of the Province. In the case of agricultural districts, where the population may be regarded as more or less fixed, we shall multiply the number of children enrolled by 5½; and in other districts which may be considered as entitled to a floating population we shall multiply the number of children enrolled by 6½. In the case of private schools, assuming that the majority are situated in places entitled to be considered as having a floating population, we shall multiply by 6. The following is an estimate of the population of the Province:—

School-children, agricultural districts	33,095 × 5½ =	182,023
„ other districts	52,978 × 6½ =	344,357
„ private schools	3,800 × 6 =	22,800
Indians (aborigines)		25,800
Total		575,000

INDIAN RETURNS.

The Indian returns will in all cases be kept apart, and in the tables that immediately follow their numbers will not be included in the balance of the population in striking the rates.

REGISTRATIONS (NOT INCLUDING INDIANS).

The following table shows the total number of registrations for the years 1918–19, 1919–20, and 1920–21; also the rates per thousand of population for births, deaths, and marriages:—

	1918-19. Population, 440,187.	1919-20. Population, 529,887.	1920-21. Population, 549,180.
Registered births	9,010.....20.46	10,002.....18.87	11,532.....20.99
Registered deaths	6,696.....15.21	4,888 ..... 9.22	4,564..... 8.31
Registered deaths less still-born	6,508.....14.78	4,618..... 8.71	4,267 ..... 7.76
Registered marriages	2,829..... 6.42	4,650..... 8.77	4,514..... 8.21

REGISTRATIONS FOR PROVINCE (NOT INCLUDING INDIANS).

The following shows the number of registrations in the various divisions of the Province for the years 1918–19, 1919–20, and 1920–21:—

Divisions and Groups of Divisions.	Births.			Deaths.			Marriages.		
	1918-19.	1919-20.	1920-21.	1918-19.	1919-20.	1920-21.	1918-19.	1919-20.	1920-21.
Victoria	1,324	1,722	1,698	838	728	687	463	755	643
Nanaimo	583	630	625	430	278	257	118	177	174
Vancouver	3,650	3,916	4,627	2,874	2,096	1,944	1,492	2,371	2,283
New Westminster	1,094	1,145	1,385	765	569	550	222	386	443
Ashcroft	168	192	312	143	95	96	43	63	69
Fairview	981	1,001	1,204	570	515	448	185	427	419
Alberni	359	499	560	348	194	202	114	125	164
Beaton	851	897	1,121	728	413	380	192	346	319
Totals	9,010	10,002	11,532	6,696	4,888	4,564	2,829	4,650	4,514

BIRTHS.

The number of birth registrations for the Province for the year 1920–21 is 11,532, as compared with 10,002 in 1919–20, an increase of 1,530, or 15.29 per cent. The numbers of actual births in the same periods are 10,687 and 9,308 respectively, showing an increase for the year

1920–21 of 1,379, or 14.81 per cent. Compared with the year 1918–19, the actual births show an increase of 53.35 per cent.

The number of delayed registrations for 1920–21 is 845, as against 694 in 1919–20.

The rate per thousand of population of actual births for the year 1920–21 is 19.45, as compared with 17.56 for the year 1919–20.

In connection with the birth registrations, reference to the racial origin or nationality of the parents may be of interest. Of a total of 11,532 registrations, 5,491, or 47.61 per cent., give both parents as British, and of these 30.62 per cent. are given as English, 10.53 per cent. as Scotch, 2.53 per cent. as Irish, 0.32 per cent. as Welsh, 3.32 per cent. as Canadian, and 0.24 per cent. as other British; 8,820, or 76.48 per cent. of the total registrations, give the father as being British, and 8,928, or 77.41 per cent., give the mother as British.

The marked increase in the number of Japanese registrations calls for remark. In 1920–21 there were 803 Japanese birth registrations; in the year 1910 the number of registrations was 20, an increase in ten years of 783, or 3,915 per cent.

The number of Chinese registrations for 1920–21 is 311, as against 114 in 1910, an increase of 197, or 171.92 per cent.

The number of births (actual) for the year 1920–21 was 10,687, and the number of registrations of death was 4,564, which gives a natural increase of 6,123, as compared with 4,420 in 1919–20 and 273 in 1918–19.

DEATHS.

The number of deaths registered in 1920–21 is 4,564, as against 4,888 in 1919–20, a decrease of 324, or 6.62 per cent. As compared with the year 1918–19, in which the number of deaths was 6,696, there is a decrease of 2,132, or 31.84 per cent.

Deaths attributed to "Diseases of the Respiratory System" continue to show a marked decrease, having fallen from 818 to 474. Deaths from influenza have fallen from 59 in 1919–20 to 37 in 1920–21.

The number of deaths under the heading "Early Infancy" continues to show an upward trend, being 640 in 1920–21, as against 591 in 1919–20.

Of the total number of decedents, 3,037, or 66.54 per cent., are described as being of British origin, 1,019 males and 721 females were given as married, 1,210 males and 584 females as single, 228 males and 321 females as widowed, 10 males and 5 females as divorced, and the balance were either still-births or not given.

MARRIAGES.

In 1920–21, 4,514 marriages were registered, as against 4,650 in 1919–20, a decrease of 136, or 2.92 per cent. Compared with 1918–19, there is an increase of 1,685, or 59.56 per cent.

The following is a classified list of deaths which have occurred in British Columbia for the years 1915 to June 30th, 1921. This table does not include Indians, for which *see* Indian returns.

	1915.	1916.	1917.	1918. (6 Mos.).	1918–19.	1919–20.	1920–21.
1. General diseases	895	936	965	523	1,242	1,140	1,131
2. Diseases of nervous system and organs of special sense	336	389	380	220	449	445	388
3. Diseases of the circulatory system	479	456	540	293	528	611	646
4. Diseases of the respiratory system	340	494	439	278	2,944	818	474
5. Diseases of the digestive system	260	224	268	109	189	259	287
6. Non-venereal diseases of the genito-urinary system and annexa	163	206	204	102	216	223	264
7. The puerperal state	50	50	59	17	40	47	54
8. Diseases of skin and cellular tissue	7	15	23	8	18	17	13
9. Diseases of bones and organs of locomotion	1	3	3	1	6	12	11
10. Malformations	51	55	51	24	42	45	23
11. Diseases of early infancy	526	438	405	186	447	591	640
12. Old age	70	80	54	37	76	90	95
13. Affections produced by external causes	583	473	455	225	414	543	503
14. Ill-defined, including executions	71	68	50	23	85	47	35
Totals	3,977	3,887	3,896	2,046	6,696	4,888	4,564

For purposes of comparison, the results of the foregoing table have been segregated and each division has been charged with what it is responsible for in the immediate past year. No. 1, "General Diseases," contains returns for "tuberculosis," "cancer," and "influenza." These three items are responsible for 800 deaths, or 17.52 per cent. of all deaths.

The following table of diseases (exclusive of Indian returns) has been compiled from returns of the whole Province from the year 1901 to June 30th, 1921. This table, like the preceding one, has been segregated, and each division shows its liability to or immunity from the diseases contained in the list for the year 1920–21.

Disease.	1902.	1903.	1904.	1905.	1906.	1907.	1908.	1909.	1910.	1911.	1912.	1913.	1914.	1915.	1916.	1917.	1918 (6 mos.).	1918–19.	1919–20.	1920–21.	Total.

CANCER.

The number of deaths from cancer for the year 1920–21 is 342, as compared with 318 in the year 1919–20, an increase of 24, or 7.54 per cent. The number of deaths from cancer this year is 8.01 per cent. of all deaths (exclusive of still-births), and the rate is 0.62 per thousand, as compared with 0.60 last year. There were 3 deaths from cancer among the Indians (not included in above).

TUBERCULOSIS.

The number of deaths from tuberculosis (this year, 1920–21) is 421, as compared with 443 for 1919–20, a decrease of 22, or 4.96 per cent. The number of deaths from tuberculosis is 9.86 per cent. of all deaths (exclusive of still-births), and the rate per thousand of population is 0.76, as compared with 0.83 in 1919–20. The above does not include 93 deaths from tuberculosis among the Indians. The following table shows the assignment of the deaths from tuberculosis to the various races:—

Race.	Population.	Deaths.	Per Cent. of Deaths from Tuberculosis.	1920–21. Rate per 1,000 Population.	1919–20. Rate per 1,000. Population.
Whites	516,833	346	67.31	0.66	0.73
Indians (aborigines)	25,800	93	18.09	3.60	3.50
Chinese	14,000	52	10.11	3.71	3.78
Japanese	16,867	22	4.28	1.30	1.20
East Indians	1,500	1	0.19	0.66	4.00
Totals	575,000	514	99.98	...	....

The following information is given as a comparative statement *re* the ages of decedents for the years 1918–19, 1919–20, and 1920–21:—

	1918–19.	1919–20.	1920–21.	Per Cent. of Deaths of 1920–21.
Under 1 year	590	623	651	15.25
1 to 2 years	126	77	61	1.42
2 to 5 years	191	124	96	2.24
5 to 10 years	135	106	105	2.46
10 to 20 years	364	213	167	3.91
20 to 30 years	1,160	423	319	7.47
30 to 40 years	1,505	650	470	11.01
40 to 50 years	777	621	581	13.61
50 to 60 years	548	550	562	13.17
60 to 70 years	486	509	549	12.86
70 to 80 years	364	427	430	10.07
80 to 90 years	155	214	203	4.75
90 years and upwards	24	32	43	1.00
Age and sex not given	83	49	30	0.70
Totals	6,508	4,618	4,267	99.92

In the above table still-born are not included with deaths under one year. In 1918–19 there were 188 still-births reported, 270 for 1919–20, and 297 for 1920–21.

One hundred and seventeen certificates of adoptions were received and filed in this office between July 1st, 1920, and June 30th, 1921.

The following are the cash receipts for 1920–21:—

Vital statistics	$2,938 74
Marriage licences	230 00
Total	$3,168 74

During the year 2,146 searches were made and 2,772 certificates issued. These totals do not include searches and certificates for military or pensions purposes, which are made free of charge.

Letters inward numbered 5,070, as against 4,657 in 1919–20. All tabulated tables follow.

I have the honour to be,
Sir,
Your obedient servant,
HERBERT B. FRENCH,
Deputy Registrar of Births, Deaths, and Marriages.

BIRTHS, JULY, 1920, TO JUNE, 1921 (INCLUSIVE).

CAUSES OF DEATH, JULY, 1920, TO

Classification No.	CAUSE OF DEATH. (After the Bertillon Classification Causes of Death, Second International Decennial Revision, Paris, 1909.)	Under 1 year.		1 to 2 years.		2 to 5 years.	
	NEW WESTMINSTER DIVISION—BURNABY.	M.	F.	M.	F.	M.	F.
	I.—GENERAL DISEASES.						
28	Tuberculosis of the lungs	....	....	....	....	....	....
40	Cancer and other malignant tumours of the stomach, liver	....	....	....	....	....	....
	II.—DISEASES OF NERVOUS SYSTEM AND ORGANS OF SPECIAL SENSE.						
60A	Encephalitis lethargica	....	....	....	....	....	....
61	Meningitis	....	1	....	....	....	....
64	Cerebral hæmorrhage, apoplexy	....	....	....	....	....	....
	III.—DISEASES OF THE CIRCULATORY SYSTEM.						
77A	Myocarditis	....	....	....	....	....	....
81B	Aneurism	....	....	....	....	....	....
81C	Arteriosclerosis	....	....	....	....	....	....
	IV.—DISEASES OF THE RESPIRATORY SYSTEM.						
89	Acute bronchitis	1	....	....	....	....	....
91	Bronchopneumonia	1	....	....	....	....	....
92	Pneumonia	....	....	1	....	....	....
92B	Following operation	....	....	....	....	....	....
95	Gangrene of the lung	....	....	....	....	....	....
	V.—DISEASES OF THE DIGESTIVE SYSTEM.						
104	Diarrhœa and enteritis (under 2 years)	2	....	....	....	....	....
109	Hernia, intestinal obstruction	....	....	....	....	....	....
	VI.—NON-VENEREAL DISEASES OF GENITO-URINARY SYSTEM AND ANNEXA.						
119	Acute nephritis	....	....	....	....	....	....
120	Bright's disease	....	....	....	....	....	....
120A	Uræmia	....	....	....	....	....	....
129	Uterine tumour (non-cancerous)	....	....	....	....	....	....
	VIII.—DISEASES OF THE SKIN AND OF THE CELLULAR TISSUE.						
142	Gangrene	....	....	....	....	....	....
	X.—MALFORMATIONS.						
150	Congenital malformation (still-births not included)	....	2	....	1	....	....
	XI.—DISEASES OF EARLY INFANCY.						
152	Other diseases peculiar to early infancy	1	....	....	....	....	....
153A	Still-born	2	....	....	....	....	....
153D	Injury by forceps at birth	1	....	....	....	....	....
	XII.—OLD AGE.						
154	Senility	....	....	....	....	....	....
	XIII.—AFFECTIONS PRODUCED BY EXTERNAL CAUSES.						
157	Suicide by hanging or strangulation	....	....	....	....	....	....
175A	Traumatism not specified	....	....	....	....	....	....
		8	3	1	1	....	....
	NANAIMO DIVISION—NANAIMO CITY.						
	I.—GENERAL DISEASES.						
10	Influenza	....	....	....	....	....	....
28	Tuberculosis of the lungs	....	....	....	....	....	....
35A	Tuberculosis not specified	....	....	....	....	....	....
39A	Cancer of face	....	....	....	....	....	....
40	Cancer and other malignant tumours of the stomach, liver	....	....	....	....	....	....
41	Cancer and other malignant tumours of the peritoneum, intestines, rectum	....	....	....	....	....	....
42	Cancer and other malignant tumours of the female genital organs	....	....	....	....	....	....
50	Diabetes	....	....	....	....	....	....
50A	Diabetes mellitus	....	....	....	....	....	....

CAUSES OF DEATH, JULY, 1920, TO

Classification No.	CAUSE OF DEATH. (After the Bertillon Classification Causes of Death, Second International Decennial Revision, Paris, 1909.)	Under 1 year.		1 to 2 years.		2 to 5 years.	
	VANCOUVER DIVISION—VANCOUVER CITY—*Continued.*	M.	F.	M.	F.	M.	F.
	V.—DISEASES OF THE DIGESTIVE SYSTEM.—*Continued.*						
112	Hydatid tumour of the liver	....	....	....	....	....	....
113	Cirrhosis of the liver	....	....	....	....	....	....
114	Biliary calculi	....	....	....	....	....	....
115	Other diseases of the liver	....	....	....	....	....	....
116	Diseases of the spleen	....	....	....	....	....	....
117	Simple peritonitis (non-puerperal)	....	1	....	....	....	....
117A	Peritonitis-appendicitis	....	....	....	....	....	....
117B	Peritonitis, gastric ulcer perforated	....	....	....	....	....	....
118	Other diseases of digestive system (cancer and tuberculosis excepted)	....	1	....	....	....	....
	VI.—NON-VENEREAL DISEASES OF GENITO-URINARY SYSTEM AND ANNEXA.						
119	Acute nephritis	....	....	1	....	....	....
120	Bright's disease	....	....	....	....	....	....
120A	Uræmia	....	....	....	....	....	....
122	Other diseases of the kidneys and annexa	....	....	....	....	....	....
124	Diseases of the bladder	....	....	....	....	....	1
126	Diseases of the prostate	....	....	....	....	....	....
127	Non-venereal diseases of the male genital organs	....	....	....	....	....	....
129	Uterine tumour (non-cancerous)	....	....	....	....	....	....
130	Diseases of the uterus	....	....	....	....	....	....
131	Cysts and other tumours of the ovary	....	....	....	....	....	....
132	Salpingitis and other diseases of the female genital organs	....	....	....	....	....	....
133A	Cholecystitis	....	....	....	....	....	....
	VII.—THE PUERPERAL STATE.						
134	Accidents of pregnancy	....	....	....	....	....	....
135	Puerperal hæmorrhage	....	....	....	....	....	....
137	Puerperal septicæmia	....	....	....	....	....	....
137B	Uræmia of pregnancy	....	....	....	....	....	....
137C	Induced abortion	....	....	....	....	....	....
137D	Eclampsia	....	....	....	....	....	....
138	Puerperal albuminuria and convulsions	....	....	....	....	....	....
140	Following childbirth (not otherwise defined)	....	....	....	....	....	....
141	Puerperal diseases of the breast	....	....	....	....	....	....
141A	Placenta prævia	....	....	....	....	....	....
141D	Septic thrombosis following childbirth	....	....	....	....	....	....
	VIII.—DISEASES OF THE SKIN AND OF CELLULAR TISSUE.						
142	Gangrene	....	....	....	....	....	....
142A	Gangrene, senile	....	....	....	....	....	....
145A	Cellulitis of neck	....	....	....	....	....	....
145B	Pustula eczema	....	1	....	....	....	....
145C	Streptoccal cellular face	....	....	....	....	....	....
145D	Pemphigus	....	1	....	....	....	....
	IX.—DISEASES OF THE BONES AND ORGANS OF LOCOMOTION.						
146	Diseases of the bones (tuberculosis excepted)	....	....	....	....	....	....
147	Diseases of the joints (tuberculosis and rheumatism excepted)	....	....	....	....	....	....
	X.—MALFORMATIONS.						
150	Congenital malformation (still-births not included)	3	6	....	....	....	....
	XI.—DISEASES OF EARLY INFANCY.						
151	Congenital debility, icterus, and sclerema	14	5	....	....	....	....
151A	Accident of labour	2	2	....	....	....	....
151B	Non-assimilation of food	7	2	....	....	....	....
151C	Hydrocephalus	....	....	....	....	....	....
152	Other diseases peculiar to early infancy	1	....	....	....	....	....
152A	Atelectasis	2	4	....	....	....	....
152B	Asphyxia	2	1	....	....	....	....
153A	Still-born	89	62	....	....	....	....
153B	Premature	37	28	....	....	....	....
153D	Injury by forceps at birth	4	1	....	....	....	....
153E	Hæmorrhagica neonatorum	4	4	....	....	....	....

REPORT

OF THE

COMPTROLLER-GENERAL

OF THE PROVINCE OF

BRITISH COLUMBIA

1921-1922

PURSUANT TO THE PROVISIONS OF THE "AUDIT ACT,"
CHAPTER 7, 7 & 8 GEO. V.

PRINTED BY
AUTHORITY OF THE LEGISLATIVE ASSEMBLY.

VICTORIA, B.C.:
Printed by WILLIAM H. CULLIN, Printer to the King's Most Excellent Majesty.
1921.

To His Honour WALTER CAMERON NICHOL,

Lieutenant-Governor of the Province of British Columbia.

MAY IT PLEASE YOUR HONOUR:

The undersigned has the honour to present to Your Honour statements of the Comptroller-General pursuant to the provisions of the "Audit Act," chapter 7, 7 & 8 George V.

Respectfully submitted.

JOHN HART,

Minister of Finance.

Treasury Department,

Victoria, October 18th, 1921.

VICTORIA, October 18th, 1921.

Hon. John Hart,

Minister of Finance.

SIR,—I have the honour to submit for the information of the Legislative Assembly, pursuant to the provisions of the "Audit Act," chapter 7, 7 & 8 George V., as follows:—

(A.) Statement of Treasury Board Overrulings (pursuant to section 31).

(B.) Statement of Expenditures on Services which have exceeded their Appropriations (pursuant to subsection (*b*) of section 32).

(C.) Statement of Payments charged against the 1921–22 Appropriations which did not occur within the Period of the Account (pursuant to subsection (*e*) of section 32).

(D.) Statement of Special Warrants issued (pursuant to subsection (*b*) of section 24).

(E.) (1.) Statement showing the Revenue for the First Six Months of the Present Fiscal Year, viz., from 1st April to 30th September, 1921.

(2.) Statement showing the Expenditure for the First Six Months of the Present Fiscal Year, viz., from 1st April to 30th September, 1921.

(3.) Statement showing Expenditures and Advances out of Moneys raised by Loan under Authority of the Legislature for Specific Purposes, 1st April to 30th September, 1921 (pursuant to subsection (*a*) of section 42).

I have the honour to be,

Sir,

Your obedient servant,

A. N. MOUAT, C.A.,

Comptroller-General.

COMPTROLLER-GENERAL'S REPORT.

(A.)

TREASURY BOARD OVERRULINGS.

Nil.

(B.)

REPORT

OF THE

MINISTER OF PUBLIC WORKS

OF THE

PROVINCE OF BRITISH COLUMBIA

FOR THE

FISCAL YEAR 1920-21

PRINTED BY
AUTHORITY OF THE LEGISLATIVE ASSEMBLY.

VICTORIA, B.C.:
Printed by WILLIAM H. CULLIN, Printer to the King's Most Excellent Majesty.
1921.

To His Honour WALTER CAMERON NICHOL,

Lieutenant-Governor of the Province of British Columbia.

MAY IT PLEASE YOUR HONOUR:

Herewith I beg respectfully to submit the Annual Report of my Department for the fiscal year ending March 31st, 1921, in compliance with the provisions of the "Public Works Act."

J. H. KING,

Minister of Public Works.

Department of Public Works,

Parliament Buildings,

Victoria, B.C., September 30th, 1921.

Dunster Bridge, Fort George District. Erection of 130-foot Howe-truss span by day-labour.

Fraser River Bridge, Dunster, Fort George Electoral District. Two 130-foot Howe-truss spans, pile piers and approaches. Built by day-labour, winter of 1920–21.

UNIVERSITY OF ILLINOIS LIBRARY

PUBLIC WORKS REPORT.

REPORT OF THE PUBLIC WORKS ENGINEER.

PARLIAMENT BUILDINGS,
VICTORIA, B.C., August 29th, 1921.

J. E. Griffith, Esq.,
Deputy Minister of Public Works, Victoria, B.C.

SIR,—I have the honour to submit the following report for the year 1920–21:—

As I held office only for the last quarter of that year, I cannot speak so authoritatively for the Department as I might otherwise have done.

At the outset I wish to take this early opportunity of recording my appreciation of the splendid assistance given me by the Assistant Public Works Engineer and the hearty co-operation afforded by all the other members of the indoor staff on my assuming this most important and responsible position.

My confrères, the District Engineers, are worthy of recognition, as I realize that without their loyal support I could not confidently have undertaken my new duties with any hope of successful results. The unlimited assistance so afforded me and the general co-operation of the entire staff should in time redound to the honour and credit of the Department as a whole.

The organization which was initiated by the Honourable the Minister and built up under the able direction of my predecessor has attained a high state of efficiency, and each year shows clearly the results of the concentrated efforts of the District Engineers, supported by the splendid co-operation of the Assistant Engineers and general foremen. It is not my intention to suggest any radical changes in an organization which is not only functioning successfully, but producing excellent results. With the exception of a rearrangement in my old engineering district (No. 2), there were no changes in the engineering staff. For the betterment of the service one or two general foremen were replaced and one Engineer in District No. 4 was appointed in place of a general foreman who resigned.

ROADS AND TRAILS.

Chiefly due to the abnormal weather conditions and the prevailing high cost of labour, the amount of work accomplished was not so extensive as in previous years. The late spring and the prolonged wet spell in the fall of 1920 not only made the working season much shorter, but caused considerably greater maintenance and repair work.

On the Lower Mainland particularly, the fiscal year might well be described as a red-letter one, the late spring and the abnormal wet fall of 1920, together with the hurricane in January, 1921, creating conditions almost without parallel. The diversion of funds for such extraordinary work naturally left very limited funds for other very necessary work.

It is gratifying to note from the District Engineers' reports that more and more attention is being given to doing as much substantial improvement-work as funds will permit, and that particular attention has been given to the all-important question of drainage.

With high cost of labour correspondingly less work was done and in many instances with decreased efficiency. This lowering of the standard of work is noticeable in both contract and day-labour work. There have, however, been exceptions, as in the case of the Thrums–Brilliant Cut-off and the Kuskanook–Sirdar Road, both important links of the Trans-Provincial Highway, where work done by day-labour was both efficient and economical.

The policy of employing *bona-fide* settlers adjacent to the works under construction or repair has been faithfully adhered to, but the settlers have been shown that such works are primarily business propositions and not undertaken solely for the purpose of creating a pay-roll in their neighbourhood. Further, preference has been given to settlers on the distinct understanding that efficiency is of primary importance.

Considerable progress has been made in linking up the various gaps in the main trunk highways. The following portions have been undertaken in 1920: Osoyoos to 9-Mile (6½ miles) over Anarchist Mountain; a section about 6 miles west of Rossland; Thrums to Brilliant (4½ miles); Kuskanook to Sirdar (5½ miles); in all, 22 miles of new construction of standard

road-bed having been constructed. In addition to this construction-work, considerable reconstruction and maintenance have been undertaken by day-labour on various sections.

The year 1920 showed marked progress in highway-development, particularly in two ways—in the amount of work done under the "Canada Highways Act" and the mileage of hard-surfacing accomplished. Although this Act came into force on July 7th, 1919, the regulations governing it were not operative till December, 1919. Hence little advantage could be taken in 1919 of the privileges of this Act, whereby this Province is entitled to approximately $1,252,000 Federal aid during the five-year period ending April, 1924. In this connection I wish specially to mention the District Engineers and their assistants who undertook the detailed work of the various Federal projects. At headquarters we are very apt to look upon such matters as "all in the days' work," and issue instructions to have the work attended to. From personal experience I realized that the Federal aid highway programme involved much additional work of a strenuous nature throughout long hours.

Regarding hard-surfacing, the following table shows clearly the rate of progress since 1917:—

Year.	Miles of Bituminous.	Miles of Carpet Coat.	Miles of Concrete.	Total Miles.
1917–18	2.14	....	....	2.14
1918–19	3.39	....	....	3.39
1919–20	4.21	1.93	....	6.14
1920–21	3.78	3.15	9.52	16.45
Totals	13.52	5.08	9.52	28.12

The comparatively large mileage of concrete pavements laid in 1920–21 is remarkable. This is the first occasion in which one-course concrete pavements have been laid in the Province, and without going into the merits and demerits of this type of construction it would appear as if it will in time be more than justified so far as this Department is concerned.

In addition to the actual work undertaken on the roads, an extensive mileage of roads was surveyed and plans prepared for prospective projects. From the table of mileages and types of construction published elsewhere in the Report of the Honourable the Minister, it will be noted that the ordinary earth road still forms about 75 per cent. of our roads.

Although the mileage of surfaced roads does not appear to be greatly increased, it should be remembered that it is usually this type of road that has been paved. However, if the use of motor-trucks increases at the present rate, the Department will require to make greater provision for surfacing earth roads, particularly in the Lower Mainland, where the roads are subject to all-the-year traffic conditions.

EQUIPMENT.

More general use has been made of trucks and tractors for haulage purposes with expeditious and economical results. The Yuba caterpillar tractor obtained for the Fort George District has been particularly efficient and labour-saving. The more extensive use of mechanical loaders at gravel-pits has also helped to solve the loading problems. Road-graders and the indispensable road-drags are more in evidence than in former years, with excellent results. The Department has now roughly $400,000 invested in road machinery and equipment.

BRIDGES.

In spite of the unusual flooding conditions and extraordinary high waters, we were, with a system of bridge patrols, able to cope with the situation.

Although there was less bridge-construction done, the work was of a high order, much of it being carried out by day-labour. The accompanying photographs are very good examples of bridge-construction. In most instances the bridge piers were constructed of concrete, so that when circumstances permitted they could be utilized for construction of steel structures. As usual, maintenance formed a large proportion of the bridge expenditure. With special bridge-gangs available it is possible to undertake this work more systematically and at a minimum of expenditure. Mr. Kilpatrick, our energetic Superintendent of Bridges, has kept closely in touch with the District Engineers and their assistants in all matters pertaining to bridge construction and renewals.

Cutbank Bridge, Peace River District, Built by day-labour, 1920.

Cutbank Bridge, Peace River District, Built by day-labour, 1920.

UNIVERSITY OF ILLINOIS LIBRARY

FERRIES.

With the exception of a new boat for the Mission Ferry over the Fraser River and one or two smaller ferries, little new construction was done. Our ferry systems are, however, being greatly improved every year, the equipment being strengthened or renewed and the ferry landings being made more accommodating. Consistent with the funds at our disposal, the ferries are meeting present requirements fairly well, and there appear to be few justifiable complaints as to the services rendered.

WHARVES.

Work on wharves was chiefly confined to the extension of and repairs to the Prince Rupert Wharf. Now that the wharfage-space is being leased, this wharf is on a better revenue-producing basis than formerly.

PROTECTION-WORK.

The principal work carried out was at Golden in extending the protection previously done on the banks of the Kicking Horse River. In conjunction with the City Council, similar work was done on the Elk River at Fernie. This concrete-slab method of protecting river-banks from erosion is proving very effective and, taking cost of maintenance into account, is more economical than other less permanent methods.

GENERAL.

Owing to the amendment of the "Land Registry Act," whereby all subdivision plans in extra-municipal territory had to be approved by the Department, considerable investigation-work was carried out; in all, 280 subdivisions having come under review. This commendable change will in time prove most beneficial, as in the past very doubtful subdivisions have been made that were not in the public interests. Now the Department will have more direct control over the lay-out of roads, thus saving needless expenditure, both to private and public bodies.

Herewith I have pleasure in forwarding the reports of the District Engineers, the Superintendent of Bridges, the Supervising Architect, and the Mechanical Superintendent, all of which contain detailed information as to the work done under their supervision.

Respectfully submitted.

P. PHILIP,
Public Works Engineer

REPORT OF ENGINEER, DISTRICT No. 1.

DISTRICT ENGINEER'S OFFICE,
PARLIAMENT BUILDINGS,
VICTORIA, B.C., August 3rd, 1921.

P. Philip, Esq.,
Public Works Engineer, Victoria, B.C.

SIR,—I beg to submit herewith my annual report for above district.

The season opened well with fine spring weather, but ended by being the wettest that has been experienced for many years. At the summit of the Malahat rains started about the middle of August and there was very little dry weather until March. A very severe storm on January 29th did considerable damage all over Vancouver Island, especially the west coast.

Extraordinary Traffic.—Heavy logging-trucks caused a large outlay in repairs and maintenance on main roads and side-roads. Legislation limiting such traffic during wet months will be welcomed. The Province of Ontario has limited loads during the wet months of March and April. The Toronto *Globe* had the following special dispatch:—

"*Trucks must carry Half Normal Load.*"

"LONDON, ONT., March 7th.—Something of a surprise was sprung to-day by County Engineer . . . when he issued a warning that no vehicle capable of carrying more than 1 ton shall, during the months of March and April, carry a load on the county highways greater than half of its normal capacity. The law is a new one, and is designed to prevent

the county roads from being cut up by heavy loads at a time when they are soft with the snows of winter and the spring rains. The County Police have been notified to strictly enforce the law in Middlesex. The penalty for infraction is a fine of $100."

In Norway, owing to the enormous expense entailed in rebuilding the Norwegian roads, which were built for lighter traffic, the authorities have found it necessary to regulate traffic to suit the roads instead of rebuilding roads to carry the traffic.

Plant.—The new trucks and other plant supplied this year have proved of great assistance.

Drainage.—This all-important subject has been given careful attention this year, with results that are very satisfactory.

Bridges.—All bridges in the district have been strengthened. Some of the longest truss bridges have been reduced to shorter spans by a pier in the centre or with trestle bents in front of both abutments. Now that logging operations in some rivers have ceased, a permanent pier of concrete can be built in the centre of some of the bridges when it becomes necessary to renew them with either steel or timber structures, reducing cost of spans considerably.

Labour.—Labour was fairly plentiful, except in some places at the northern end of the Island.

Construction.—A start was made on the Hardy Bay–Coal Harbour Road, but, chiefly owing to the wet weather, progress was not what had been anticipated and the work was closed down.

The work of preparation for a permanent pavement, such as drainage and widening, on the Island Highway from the Nanaimo City boundary to Chase River School was started. Gravel and rock were placed in the road-bed and rolled into the subgrade and the shoulders of the road reinforced. This work also had to be stopped on account of excessive wet weather.

Special work done in the spring, to relieve distress at various places in the district, principally in Newcastle and in the neighbourhood of Victoria, very greatly improved the South Wellington Road, the Holden–Corse Road, the Waterloo Road, and the Becks and East Wellington Roads. The Sooke Road, Malahat Drive, and at Glenora, in the Cowichan District, roads were also improved; the work consisted chiefly in widening narrow portions of the roadway, reducing sharp curves, clearing the right-of-way to the full width of 66 feet to let in the sun and air, and in improving drainage-ditches and building more culverts.

Three miles of new road were constructed on Saltspring Island, giving residents on Mount Tuam access to Fulford Harbour.

The most important work carried on during the year was the successful completion of the one-course concrete pavement on Island Highway from Craigflower Bridge to Parsons Bridge.

Returned soldiers have been employed whenever possible; many of them were residents in municipalities.

Respectfully submitted.

A. E. HODGINS,
District Engineer.

REPORT OF ENGINEER, DISTRICT No. 2.

NEW WESTMINSTER, B.C., August 23rd, 1921.

P. Philip, Esq.,
Public Works Engineer, Victoria, B.C.

SIR,—I beg to submit annual report for year 1920–21 for District No. 2, comprising Chilliwack, Delta, Dewdney, North Vancouver, New Westminster, South Vancouver, and Richmond Electoral Districts.

Chilliwack District.—During the past year very little work of a permanent nature was carried out by the Department in the matter of road-paving in this district, with the exception of 1½ miles on the Trans-Provincial Highway within the City of Chilliwack, which work was carried out by the Columbia Bitulithic Paving Company.

The type of hard surface used was a 2-inch asphaltic concrete surface on an old macadam base. It was found impossible to scarify the old macadam owing to the large rock used in its construction. The inequalities in the grade were therefore brought up with binder. The roadway as now completed is entirely satisfactory in every way.

Ladner–New Westminster Road, Project 5, Section B. Laying concrete paving, 14 feet wide, by contract, 1920.

UNIVERSITY OF ILLINOIS LIBRARY

Most of the work in the district consisted of ordinary maintenance and repairs; 10,051 cubic yards of gravel were hauled and spread on the Trans-Provincial Highway throughout its entire length through the Electoral District of Chilliwack.

The Ford truck which was purchased during the year has been of very great service in repair-work and in transporting men to and from work. It has been possible to rent trucks for the purpose of dragging the roads during the winter months and very beneficial conditions have resulted.

A number of important changes were made in removing dangerous curves in the main road, particularly at the Vedder Mountain section, where a number of rock bluffs were blown out, the road widened, and the curvature reduced. In several places where the roadway had been found all too narrow for the present-day traffic, widening was carried out, the idea being to undertake this class of work each year.

Several old bridges were replaced by new structures during the year, and it is anticipated that the renewal necessary from year to year will increase rather than diminish for some time to come. All bridges were maintained satisfactorily.

Owing to the flood conditions in the Fraser River and the resulting high water at Sumas Lake, the highway between Abbotsford and Vedder Mountain was closed to traffic for about six weeks. When the waters receded it was found necessary to carry out extensive repairs to the portion of the road flooded. This was done without delay or much inconvenience to the public.

New ferry approaches were constructed in connection with the Agassiz–Rosedale Ferry. These are of a splendid type of construction and are provided with adjustable landing-platforms which operate on rails, and can be raised and lowered by means of cable to suit the varying stages of the water in the Fraser.

Delta District.—During the past year the most important pieces of work undertaken by the Department in this district were in connection with hard-surfacing. The Trans-Provincial Highway (Yale Road) from Westminster Bridge to Johnston Road, a distance of about 5.57 miles, was surfaced 18 feet wide with concrete pavement.

A great deal of difficulty was experienced owing to the unusually heavy rainfall during the early part of the fall. About three-fifths of a mile of this work was done by Provincial day-labour. Considerable difficulty was encountered in the preparation of the subgrade. In one stretch of about 150 feet long peat was encountered; this was excavated to a depth of 3 feet and 22 feet wide; a heavy brush mattress was spread on the bottom of the excavation, on which was laid cedar puncheon 6 inches thick and 20 feet long; the whole excavation was then back-filled with selected material after ample drainage into the side-ditches was provided for. At other points, owing to the wet weather, the subgrade became muddy; this mud was carefully removed and the inequalities in the grade brought up by selected material. Particular attention was paid in protecting the green concrete slab from the effects of frost, heavy coating of straw providing adequate protection.

One might fill pages of the difficulties on the above work, arising from many causes. For instance, on the section of Peterson's contract, which was constructed by day-labour, the Department faced the problem of transporting 200 tons per day of material over a side-road (the only means of access to the contract) having a grade of 15 per cent. and a surface consisting of mud 2 feet deep. This is mentioned merely as one of the difficulties encountered in the work. Altogether, taking into consideration the adverse weather conditions, the roadway thus constructed is almost perfect.

On the Ladner–New Westminster Trunk Road (Semiahmoo Road) a 14-foot concrete pavement was constructed by contract for a distance of 1½ miles. The bulk of this slab was laid over a stretch of country of a boggy nature, very great care being given to the preparation of the subgrade, and where found soft, sand and gravel were applied in sufficient quantities to obtain the necessary stability. No reinforcement was used and up to date of writing this pavement stands without a flaw.

Owing to the narrow road existing before paving operations began, the problem of filling the existing ditches (approximately 2 feet wide and extending 1 foot below the surface of the ground and located 3 inches from the outside edge of the pavement) had to be met. The following method was adopted:—

A layer of brush mattress 6 inches thick when compressed was covered with a layer of large crushed rock 6 inches deep. This rock varied from 4 to 6 inches in size, and on the top of this

another layer of 1-inch rock was placed to the depth of 6 inches. These refilled ditches in turn were drained into the new ditches by means of lateral drains 12 inches deep and 6 inches wide, filled with crushed rock. These laterals were placed at intervals of 100 feet.

The balance of the work in the district consisted of the usual maintenance and repairs. About 13,000 cubic yards of gravel were hauled and spread with fairly good results on the Trans-Provincial Highway between Johnston Road and Aldergrove. More attention than formerly was given to the ditching throughout the district, with most beneficial results.

It has been found that, with the use of a mechanical loader and Government-owned trucks, the cost of hauling gravel has been reduced by 50 per cent. over the old method of loading by hand into wagons. The duplex truck has performed wonders during the winter in the matter of dragging and grading, and to this must be attributed the good road-surface maintained in the Municipality of Surrey during the winter months.

The Barnston Island ferry service was continued along same lines as previous year.

No bridge-work other than ordinary maintenance and reflooring was undertaken.

Dewdney District.—In this district the roads were maintained in excellent condition, with the exception of the Hatzic Prairie and Dewdney Road and road to Farms. The Dewdney Trunk Road continues to carry heavy truck traffic, necessitating continual maintenance throughout the year.

In the Nicomen and Hatzic Prairie Districts there has been considerable trouble in the matter of procuring men to do road-work, as they refused to walk any distance to work. This will now be overcome owing to the fact that the Department has provided four trucks for the purpose of conveying men and material to these outlying districts, which work cannot nowadays be done by team.

Practically all the work in the district consisted of maintaining existing highways, and the excellent conditions obtained are largely due to the care and attention given by General Foreman Wylie. A considerable quantity of Nicomen gravel was spread as surfacing material, with excellent results.

A great deal of loss was experienced by the farmers at Nicomen Island owing to flood conditions, and due to the same conditions the Department was faced with heavy expenditure in repairing roads.

North Vancouver District.—The conditions in North Vancouver Electoral District showed no great change during the past year. A certain amount of land was taken up mostly by returned soldiers. The influx of new settlers was particularly evident in the Pemberton Meadows and Gibson's Landing sections.

Numerous applications for construction of new roads were received, but on examination it was found that little expenditure was warranted by existing conditions. New roads actually constructed were: A short section of Halfmoon Bay to connect the existing road with a new Federal wharf constructed during the previous winter; a portion about half a mile in length near Green Lake, on the line of the Pacific Great Eastern Railway, to open up and give access to a considerable area of easily cleared meadow land, part of which was under cultivation; and a short section at Gibson's Landing.

The early and continuous rainfall of the winter resulted in softening of the earth roads in the Coast sections and considerable damage from auto traffic. Fortunately, a sufficient reserve fund was on hand to carry out fairly thorough spring repairs in the month of March, with the result that the roads in summer were in fairly good shape throughout.

A considerable increase of population was experienced in Pemberton Meadows, a most fertile section, the development of which is seriously hampered by the recurrent floods which almost annually inundate the cultivated areas, destroying crops and damaging the road. The annual allotment for this section is spent in repairing the damage done by the floods, with little improvement in road conditions.

New Westminster District.—The work in this district consisted chiefly of usual maintenance, together with flush-coating with tarvia the north approach to the New Westminster Bridge. The coating brought this stretch of roadway into splendid condition, and the same withstood the winter without any apparent injury. That portion of the River Road lying between Westminster boundary and the Municipality of Burnaby was treated with a flush-coat of tarvia with good results.

Ladner–New Westminster Road, Project 5, Section B. Concrete paving, 14 feet wide.

Trans-Provincial Highway, Project 9, Section E, Kingsway, South Vancouver. Laying 2-inch asphaltic concrete on concrete base near Central Park.

UNIVERSITY OF ILLINOIS LIBRARY

Richmond District.—In the Municipality of Richmond during the fiscal year 1920–21 the paving of 1.9 miles on Nos. 5 and 9 Roads on Lulu Island was completed. This section was paved with one-course concrete 16 feet wide. The rain, which started early in September and continued with only slight interruptions until after the New Year, interfered greatly with the progress of the work, delaying completion until well on in December. The completed pavement, however, is an excellent piece of construction.

A contract was also let for the construction of suitable landings at Woodward's Landing and Ladner, to replace the old floats which had proved inadequate. A coal-bunker to render coaling less difficult was also constructed and is now operating satisfactorily.

Ordinary repairs were carried out on roads in the Government lands in Point Grey Municipality. Chiefly to relieve the unemployment situation, about $100,000 was spent on development-work on the site of the University of British Columbia at Point Grey. Nearly 100 acres were cleared, 1,500 square yards of macadam laid, and a 76-foot frame-trestle bridge of heavy design constructed. About 275 men were continually employed from December 1st to the end of March.

The Eburne bridges were redecked, an operation which is practically a yearly necessity. An idea of the volume of traffic which passes over these bridges at times can be obtained from the fact that during the races last summer at Minoru Park over 1,100 automobiles were counted going over the bridge in an hour and three-quarters. Even in ordinary times these bridges carry a fairly continuous heavy traffic. In addition, mechanism for turning by electricity the swing-span of Sea Island Bridge was installed and is operating satisfactorily.

South Vancouver District.—Since all of this district consists of organized municipalities, the Public Works Department undertakes no work directly, but contributes a portion of the cost of work which the Government may consider justifiable. In this way during the past year the Government bore equally with the Municipality of South Vancouver the cost of reconstructing the River Road Bridge, and with Burnaby Municipality the cost of repairing a number of bridges on the Hastings–Barnet Road.

In addition, half the cost of certain macadamizing and repairs to the latter road from Ellesmere to Sperling Avenue was also borne by the Government. The section of the River Road in South Vancouver extending from Fraser Avenue East to the boundary of Burnaby was resurfaced with a 12-foot coat of tarvia-treated macadam. The asphaltic concrete pavement laid on Fraser Avenue was patched where required.

The section of Kingsway lying within the district of South Vancouver Municipality, on which a strip in the centre was originally left unpaved for a probable double-line car-track, and which had always constituted an obstruction to traffic, was also taken in hand and paved by contract with asphaltic concrete surface on a 6-inch concrete base.

All of which is respectfully submitted.

E. H. VERNER,
Acting District Engineer.

REPORT OF ENGINEER, DISTRICT No. 3.

DISTRICT ENGINEER'S OFFICE,
KAMLOOPS, B.C., August 13th, 1921.

P. Philip, Esq.,
Public Works Engineer, Victoria, B.C.

SIR,—I beg to submit annual report for the above district for the year 1920–21.

In Kamloops District early spring repairs were carried out in the usual manner; nearly all of the 1,400 miles of road in the district were either graded or dragged. The repairs on such a large mileage take up such a large portion of the district vote that very little, as a rule, is left to carry on a very extensive gravelling programme, except on those roads for which special appropriations are available.

During the year many colonization roads were constructed; among these were Strawberry Heights Road, tributary to Kamloops, Squilax–Scotch Creek, settlement roads at Magna Bay, and extension of Blind Bay–Eagle Bay Road; these latter being in the Shuswap Lake section, a country which, when thoroughly opened up, will be a great asset to the district. The Chase

Creek Road, which has been under construction since 1916, was completed this year. In the North Thompson section roads were constructed at Vavenby and McMurphy.

Under the "Highway Loan Act" an extensive programme of metalling was carried on on the Kamloops–Vernon Road; the material was hauled by trucks loaded from bunkers, and another year's operations should put this important road in good shape.

During the latter part of the year important roads were started as relief-work—one to be the main Kamloops Road to the south-west, and the other to eliminate Kault Hill, on the Kamloops–Chase–Salmon Arm Road.

Bridge-maintenance work was carried out during the year, and while no very large structures were built, bridges were put in at Sorrento (known as the Kinghorn Bridge), at Scotch Creek, and Adams River.

In the Ferry Department the most important work was the installation of a new power-ferry between Sorrento and Scotch Creek.

In Yale District the repair charges were greatly increased by serious cloudbursts, which carried out stretches of roads before them.

The most important work carried out in the district was the construction of the road known as the 1-Mile Road, lying between Aspen Grove and the Similkameen boundary. This road shortens the distance between Merritt and Princeton by some 13 miles, besides reducing grades and curvature. Short pieces of road were also constructed at Winch Siding and Walhachin, a connection to the new spur of the Basque Chemical Company was completed.

Under the "Highway Loan Act" considerable gravelling was done on the Merritt-Kamloops Road, on which work a mechanical loader was used.

Respectfully submitted.

G. B. WHITEHEAD,
District Engineer.

REPORT OF ENGINEER, DISTRICT No. 4.

DISTRICT ENGINEER'S OFFICE,
PENTICTON, B.C., August 9th, 1921.

P. Philip, Esq.,
Public Works Engineer, Victoria, B.C.

SIR,—I beg to submit herewith my general report on the work done in the above district during the fiscal year 1920–21.

Roads (Maintenance, Repairs, and Improvements).—During the past fiscal year some 2,500 miles of roads were maintained at an average approximately of $6 per mile, including supervision, material, tools, etc. The motor traffic increases about one-third every year; this particularly applies to the heavier type of trucks. It is quite safe to say that one-fourth of our total appropriation is used to repair the damage occasioned by the hauling of prohibitive loads on our earth and gravel roads. It is to be hoped that this condition is to be remedied in the near future, as the situation is getting out of hand, and it will be impossible to keep the roads passable with the small appropriation allowed. About 1,700 cars of fruit alone are shipped every year from the Okanagan Valley, about 60 per cent. being hauled over our main roads. The only solution I can see for the future is to employ maintenance gangs constantly, winter and summer, keeping the main trunk roads in repair. The question of hard-surfacing any considerable number of miles is, of course, not to be considered, as the cost at this time would be prohibitive.

Trails.—About 800 miles of trails are also maintained in this district, the chief expense being clearing out the fallen timber in the early spring. These trails give access principally to mining camps and are for the use of Game Wardens and Fire Rangers.

Bridges.—A considerable amount of money was expended in reinforcing and repairing the bridges throughout this district, and several new bridges were constructed in North Okanagan District, including Enderby, Haynes–Wright, and Robinson Bridges. I find that the method of laying the floor, by using a 3-inch plank at a right angle to the traffic, with a 2-inch plank for a wearing surface, dressed on top, to be very satisfactory, this, in my opinion, should lengthen the life of our bridges considerably, as the vibration is reduced to a minimum by adopting this practice.

Trans-Provincial Highway, Project 23, Section D, Rossland–Christina Lake. New construction by contract.

Trans-Provincial Highway, Project 23, Section D, Rossland–Christina Lake. New construction by contract.

UNIVERSITY OF ILLINOIS LIBRARY

Ferries.—There are four ferries operating in this district; i.e., Shuswap Lake Steamboat Service, which runs twice a week, accommodating the settlers as far north as Seymour Arm. From the very few complaints I have received, I would infer that this service has given good satisfaction during the season. The Westbank–Kelowna Ferry, which is a connecting-link of our main trunk road through the Okanagan Valley, has apparently given very great satisfaction, making four trips per day in the summer and two in the winter. On account of the increased traffic at this point, it might be advisable to consider the question of a continuous service in the near future. The Summerland–Naramata Ferry, which furnishes a service between these two points, is not, in my opinion, a complete success, in view of the very small traffic returns submitted by the ferryman. During the first nine months of the past season the total receipts amounted to $670, and I think it might be well to consider discontinuing this service at the end of the present fiscal year. This is a matter, however, which would require very careful consideration.

The Dog Lake Steamboat Service, which has been in use for a number of years, will no doubt be discontinued as soon as the Kettle Valley Railway Company has established its service at Dog Lake. This ferry has supplied a great need in the past.

Trans-Provincial Highway (Construction).—Six miles and a half of standard highway was constructed, commencing at Osoyoos and climbing up the Anarchist Mountain; this is part of our Trans-Provincial system and will form part of our through highway from coast to coast when the other connecting links are constructed. A section of this road was also built from Rossland west, a distance of about 6 miles. This work was completed on June 30th this year. I may say that the Dominion Inspecting Engineers expressed themselves as very well satisfied with the standard of construction. The minimum width of the roadway is 16 feet and the maximum grade is 8 per cent. Both the above-mentioned sections were built by contract (Major A. W. Davis), and I do not think that the most exacting person could offer any criticism regarding the quality of the construction.

Surveys.—About 40 miles of new line were surveyed, conforming with our standard type of main highways. All the level crossings, with the exception of one, in the Fraser Canyon route, were eliminated, overhead crossings being substituted therefor.

Yours obediently,

W. K. Gwyer,

District Engineer.

REPORT OF ENGINEER, DISTRICT No. 5.

District Engineer's Office,
Court-house, Nelson, B.C., July 13th, 1921.

P. Philip, Esq.,
Public Works Engineer, Victoria, B.C.

Sir,—I beg to submit general report dealing with the work carried out in the above district during the fiscal year 1920–21.

Roads and Trails.—The policy inaugurated in the preceding year of doing as much permanent work as possible was continued throughout the year, with very satisfactory results, and where our main roads are permanently located they are gradually being widened, ditched, crowned, and gravel-surfaced.

Nelson Electoral District.—Practically no new roads or streets were opened up, but the entire appropriation was spent in maintenance, gravelling, and extensive sidewalk repairs. The major portion of the Nelson District mileage is now within the city limits, the section known as Fairview having been added to the municipality just as we had put the main thoroughfares in good condition for traffic.

Trail Electoral District.—About 41 per cent. of our appropriation was spent on reconstruction and gravelling, most of the latter being done with 3-ton Federal trucks at a cost varying from 44 cents to $1.79 per cubic yard, depending on the length of haul. A great boon to the travelling public was provided by the completion of the Thrums–Brilliant Cut-off on the main road from

Nelson to Trail. This cut-off reduces the distance between the two cities by 7 miles, with a maximum 8 per cent. grade as against 22 per cent. on the old road.

Between Castlegar and Trail good work was accomplished with a new Adams leaning-wheel grader, the country being so favourable for the use of such a machine that it more than paid for itself in the saving effected in one month. From Trail to Columbia Gardens and Waneta, also through to Salmo and Ymir, the roads were kept in good condition for traffic, but considerable work will have to be done between Salmo and Columbia Gardens, once the interstate road leading from Metaline is connected up to our system of roads at Boundary Lake, as the auto traffic from Spokane will then be heavy.

On the Granite Road and Nelson–Balfour Road we permanently widened and surfaced 4.5 miles, while the balance of the roads (mostly laterals) in the district were all kept fit for traffic.

Rossland Electoral District.—Rock-surfacing was put on portions of the main travelled roads, while at the same time we endeavoured to keep in good repair all the lateral roads and cleaned out the main trails. The road between Rossland and Trail, a distance of 7 miles, will eventually be rock-surfaced throughout its entire length, and at the present time is one of the best roads in West Kootenay.

Kaslo Electoral District.—Most of our appropriation was spent in the Creston Valley, where considerable new work was done. The main trunk highway through the valley, forming a portion of the Trans-Provincial Highway, was extended from Sirdar to Kuskanook, a distance of 5 miles, thus connecting the Prairie Provinces with Kootenay Lake. Where this road passes through a rich farming district between Creston and Erickson, 4,200 lineal feet of water-bound macadam 16 feet wide was laid, and we hope to continue same during the coming year. Both of those works were efficiently undertaken by day-labour well within the estimated costs. Sufficient work was done on all roads in the Kaslo District to meet the needs of the settlers and about 4 miles of new roads were constructed, while trails that were required for mining or other purposes were cleaned out and repaired where necessary.

Revelstoke Electoral District.—The principal work was on the main highway between Boulder and Three Valley, a portion of the trunk road which will eventually link up Revelstoke with the Okanagan. This was carried out by contract, and 2 miles of the work will rank among the most difficult construction to be met with anywhere in the mountains. In order to provide additional work for the unemployed as could be economically undertaken, considerable amount of the rock-work was undertaken in the winter months.

The completion by contract of the Arrowhead North Road as far as Hall's Landing is proving of considerable benefit to the many agricultural communities hitherto dependent on shipping produce by boat to Arrowhead.

As far as possible the district appropriation was spent in reconstruction and gravelling, and all outlying sections of the district were attended to, both as regards roads and trails.

Slocan Electoral District.—The New Denver–Three Forks Road was opened up, with the exception of some rock points between Alamo and Three Forks. A start was made on the construction of the Edgewood–Vernon Road by building 2¼ miles from the Edgewood end, leaving 19¾ miles still to be constructed. Both of these works were satisfactorily carried out by day-labour.

Branch roads to the extent of about 3 miles for settlers and mining development had to be undertaken out of our district vote, and this, combined with the necessary work on mining roads and trails, left much too small a balance for maintenance on main roads.

Bridges.—The following structures were built:—

Revelstoke Electoral District: Goldfield's Bridge, one 100-foot standard Howe-truss span on pile abutments, built by day-labour.

Trail Electoral District: Salmonbelly Bridge, Ymir, one 90-foot standard Howe truss on concrete abutments, built by contract.

In addition, eighteen new stringer bridges were constructed and extensive repairs carried out on eight truss bridges throughout the engineering district.

Ferries.—No new ferries were installed during 1920–21, but plans are under way for the renewal of existing ferries at Nelson and Creston. The ferry at Castlegar continues to work efficiently and to give satisfactory service.

Surveys.—About 50 miles of road were located with outside assistance, and on none of these locations will there be a grade exceeding 8 per cent.

Trans-Provincial Highway, Project 23 J. Macadamizing by day-labour near Creston.

Trans-Provincial Highway, Project 23 J. Macadamizing by day-labour near Creston.

UNIVERSITY OF ILLINOIS LIBRARY

Supervision.—The cost of supervision, including the salaries of general foremen, District Engineer, and office and travelling expenses, also Resident Engineers and assistants, amounted to 4.1 per cent., which is considered very favourable.

General.—The short experience we have had with trucks and heavy graders has amply demonstrated their usefulness in expediting the work in an economical manner, and thus making the Department more independent of expensive and, at times, unreliable team-work.

This report would be incomplete without placing on record the loyalty, enthusiasm, and co-operation of the general foremen, who have given of their best in the fulfilment of their duties, while I also wish to express my appreciation of the courtesy and encouragement received from the Department.

Respectfully submitted.

Wm. Ramsay,
District Engineer.

REPORT OF ENGINEER, DISTRICT No. 6.

District Engineer's Office,
Cranbrook, B.C., July 4th, 1921.

P. Philip, Esq.,
Public Works Engineer, Victoria, B.C.

Sir,—I beg to submit the following report for year 1920–21:—

Outstanding features of this fiscal year were increase of wages, shortening of working-hours, scarcity of labour, and change of the rule of the road. This latter took effect on July 15th, 1920, and owing to the well-planned advertisements and the posting of many notices along the highways no accidents occurred, and in a surprisingly short time drivers became accustomed to turning to the right.

Roads and Trails.—With a view to the permanent improvement of the main highways, surveys were undertaken to secure data required in connection with the Federal-aid programme, the most important of these surveys being from Dorr to Gateway; from Wasa to Sheep Creek; sections from Canal Flat northerly; sections from Cranbrook to Yahk (especially Moyie Lake Diversion); and the survey for a road to connect the town of Corbin with the Crowsnest.

Personal investigations were made in connection with the following: Waterton Lake–Flathead and Flathead Boundary bridge and road connections for the purpose of assisting oil enterprises and other interests in coal and timber situated in the south-east corner of the Province and isolated from the road system of British Columbia and from any railway connection. The Waterton Lake route would give access to the roads and railways of Alberta, the Boundary Bridge proposition to those of Montana, and Crowsnest connection with Alberta, thus co-operating with Alberta Highway Engineers in the matter of having the British Columbia portion of the Inter-Provincial Highway meet the Alberta portion of it at a suitable place. The junction of the Inter-Provincial Highway branch at Kingsgate with the road from Spokane was similarly gone into with Idaho Highway Engineers. The Gold Creek country was explored in reference to bringing it into touch with Waldo and Cranbrook; Coal Creek Diversion, for the purpose of arranging for an improved route away from the waste-dumps of the Crow's Nest Pass Coal Company; Elk Valley Road improvements, for the purpose of renewing bridges and repairing the road in the Upper Elk Valley for settlers and coal interests; Wattsburg roads, for the purpose of investigating improvements in conjunction with the owners of a large mill now being built; Yahk Diversion, to give better access to the town from the Inter-Provincial Highway; Harrogate Gravel-pit, to co-operate with the Canadian Pacific Railway in the matter of changing the main trunk road to Golden, so that access could be had by the railway company to the gravel-pit; railway crossings to be installed at Yahk, at Caithness, near Morrissey, and near Wasa; trails up St. Mary River and Perry Creek to look into the question of bridges and other improvements; also numerous propositions of minor scope, such as access to individual farms, etc.

With regard to works undertaken, the following were the most extensive: Wasa Fill on portion of improved location near Wasa; an improved diversion on the Bull River to Fort Steele section; Fort Steele streets; Inter-Provincial Highway, gravelling and reconstructions;

Sellentin Diversion, new road near Invermere; improvements to North Star Mine Road, Sullivan Mine Road, Paradise Mine Road, Horsethief Road to mines in Columbia District, St. Eugene Mine Road; sidewalks built in Kimberley; Bull River South Road for settlers; Peghin Road for settlers in St. Mary Prairie country; diversion near Marysville of the main road from Cranbrook to Kimberley; Dairy Road to give access to dairy-farm near Fernie; Cokato Road, Toby Road, Dragon Slide Diversion in Columbia District; flume and sidewalk repairs at Moyie; a diversion on the road to Skookumchuck; Findlay Creek Road for ranchers; Ottason Road near Golden for farmers; street improvements at Golden; Degeordie Road near Donald for settlers; and improvements to Elk Valley Road.

When necessary the snow was ploughed off the roads in winter, the blade being fixed to the front of the Federal truck. Work was done on St. Mary Trail, opening it up for about 30 miles, and building two bridges across the East and North Forks of the river. Perry Creek Trail, together with numerous trails of smaller extent, were opened up.

Bridges.—The most important bridge-work carried out is as follows: The removal of one 150-foot Howe-truss span intact from its old position over the Kicking Horse River at Golden to a site about 250 feet lower down stream, where it was placed on concrete piers; the other 150-foot Howe-truss span being dismantled and re-erected over the Columbia River at Brisco; the Wasa Trestle in the improved road diversion near Wasa; new 150-foot Howe-truss span over the Elk River at West Fernie; new bridge over the Elk in the Upper Elk Valley; two bridges over fork of St. Mary River. Following the Department's policy of replacing old wooden structures by culverts and fills where feasible, considerable work of this nature was undertaken. Most of the bridges were erected by contract.

River-bank Protection.—At Natal some work was done of a minor nature to divert the course of Michel Creek into safer channels; at West Fernie pile-wall protection was built in conjunction with Elk Valley Lumber Company; in conjunction with the City of Fernie, the concrete-slab protection was continued; at North Fernie a pile wall was commenced jointly with the Crow's Nest Pass Lumber Company; at Golden extensive protection of the concrete-slab method was carried on; and at the mouth of St. Mary River a pile wall was built to protect the main road.

All protection-work successfully withstood the flood period. There was no loss of bridges and traffic was not interfered with.

Machinery.—A mechanical loader was introduced into this district for the first time, and in conjunction with truck-haulage is giving great satisfaction, with resultant economy in gravelling roads.

Subdivision Plans for Approval.—The requirements of the new "Land Registry Act," whereby subdivision plans are subject to the approval of the Public Works Department, will ensure economy to the Government when considered necessary to construct roads on subdivisions. In all, twenty cases were investigated and approved after some modifications.

Numerous applications by individuals or companies to construct culverts, pipe-lines, etc., across Government roads were also investigated and approved.

I wish to express appreciation of the willing assistance received from all in the Public Works Department at Victoria and in this engineering district; also for assistance and co-operation from the Forestry Department, the Water Rights Branch, the Government Agents, the police, the local Telephone Company, and the Canadian Pacific Railway officials.

Yours obediently,

J. C. BRADY,

District Engineer.

Trans-Provincial Highway, Project 23 J. Rock-crushing equipment near Creston.

Caterpillar tractor hauling grader, Fort George.

UNIVERSITY OF ILLINOIS LIBRARY

REPORT OF ENGINEER, DISTRICT No. 7.

DISTRICT ENGINEER'S OFFICE,
PRINCE RUPERT, B.C., August 16th, 1921.

P. Philip, Esq.,
Public Works Engineer, Victoria, B.C.

SIR,—I have the honour to submit herewith my report for fiscal year 1920–21, as follows:—

Organization.—During the previous year our organization seemed to work fairly smoothly, and for that reason it was not considered necessary to make any drastic changes. A few changes were made in local foremen only. It was found, however, before the season ended, that there was more work being done than could be properly supervised with the limited staff. A total of $443,068.72 worth of work was done at a cost for supervision of 4.14 per cent., which is below the average for this class of work.

Weather.—The winter of 1919–20 was the longest and most severe on record. In most parts of the district the snowfall was about double the average. Winter was followed by a very wet, late spring. Rain was recorded on twenty-six days in June at Francois Lake. The first two weeks of July were exceptionally hot. The balance of the season was generally favourable and the following winter was particularly favourable for the class of work we were doing.

Labour.—Labour conditions were the worst yet experienced. Wages were increased an average of 50 cents per day, but the increased wage did not seem to have the effect of bringing about better conditions. Towards the fall there was a change for the better. The few gangs which were kept going all winter on bridge-work rendered very excellent service, easily 50 per cent. better than we had been getting previously.

Materials.—The year was marked by the extreme cost of materials of all kinds. With the exception of powder, the cost of all materials was higher than ever before, but at the close of 1920 lumber took a big drop, reducing considerably the cost of bridges which were constructed during the winter.

Economic Conditions.—Generally speaking, farm crops were below the average, but a greater acreage was harvested, due to increased settlement. Mineral production was increased considerably. The Silver Standard, Surf Inlet, Premier, Granby, and Dolly Varden all showed an increased output up to the end of 1920. The drop in the price of metals seriously affected production from that time on. The placers of Atlin also made a creditable showing. Lumbering was exceptionally good during the spring and summer, but the market fell to pieces in the fall. The fisheries report an exceptionally good year. Altogether it was a good year economically.

Settlement.—A large number of very good settlers took up land in the Omineca and along the Skeena. In addition, a lot of prospecting and developing was done in the mineral belts. The demand for more and better roads and trails was thereby increased.

Roads and Trails.—On account of the weather conditions noted above the cost of maintenance and repairs ran very high and delayed the commencement of new construction. The need for more attention to drainage and to getting the roads into a shape so that they can be machine-repaired was strikingly demonstrated. The more general use of motor-cars and trucks also demonstrated the need for starting surfacing with gravel as soon as possible.

Considerable new construction was done, but only the more important will be mentioned. The Salmon River Road was extended for 1½ miles; this was very heavy work, mostly in rock. A start was made on the construction of the Port Clements–Tlell Road to connect up the east and west coasts of Graham Island, and also an extension of 1 mile on the Delkatla–Chown Point Road, Graham Island. A heavy rock-cut was taken out at Colleymount, on the Colley Mountain Road. On the Main Fraser Lake Road, which forms a part of the Fort George–Hazelton Road, Project No. 18, 21 miles were slashed, 15 miles cleared, and 10 miles graded. On the North Francois Lake Road, Project No. 19, the remaining 4 miles were completed. A number of settlement roads were constructed or partially constructed, totalling approximately 30 miles of new work.

In addition to the above, extensive reconstruction of old roads was carried out and also a number of new trails constructed, mainly in the mineral areas. Construction constituted 56 per cent. of the whole; reconstruction, 19 per cent.; and maintenance, 25 per cent.

An attempt was made to do a little better class of work than what was done formerly. More attention was paid to drainage, and wherever funds would permit roads were graded to a greater width. The advent of motor traffic necessitates wider roadways.

River-protection.—Although there had been a very heavy snowfall during the previous winter and heavy rains in the spring, the run-off was slow; hence not much damage was done through floods. The principal river-protection work carried out was at Alice Arm, where a quarried-rock wing-dam 600 feet long was put in, which served to prevent extensive damage. On the Bella Coola River 800 feet of mattress-work was done immediately below the Salompt Bridge, and in addition three big log-jams removed.

Bridges.—A new 100-foot Howe-truss span was put in at Williams Creek. Fiddler Creek, 74-foot span, and Kitsequekla and Brown Creek, 60-foot spans, were renewed. In addition, a great number of bridges were repaired. Altogether there was more care taken in the construction of bridges. Better material and better workmanship were evident.

Ferries.—The maintenance of ferries required considerable attention. Some of the old ferries have practically outlived their usefulness and constant attention is needed. An attempt was made to improve the approaches and landings, as it was found that traffic had the most difficulty in getting over the approaches. A new 15-ton ferry was constructed for Usk on improved designs and worked very satisfactorily. Also two new wharves were constructed for the Francois Lake Ferry.

Wharves.—The Bella Coola Wharf was repaired and extended for 10 feet. About 200 feet of the Prince Rupert Wharf was reconstructed so as to accommodate fish-packing companies; the wharf was also extended for 126 feet and a building erected on it for the accommodation of fish-packers. Other wharves and floats were properly maintained.

Conclusion.—The development of the district is proceeding rapidly and the demands for more and better public facilities are becoming more urgent every day. It is hoped that the cost of construction and maintenance will be reduced in the near future to the point where the annual appropriation will take care of the needs of the district.

It is a pleasure to be able to record again the unfailing support given by headquarters staff, the co-operation of other departments, and the commendable service rendered by my office staff and field organization generally.

All of which is respectfully submitted.

A. L. CARRUTHERS,
District Engineer.

REPORT OF ENGINEER, DISTRICT No. 8.

DISTRICT ENGINEER'S OFFICE,
SOUTH FORT GEORGE, B.C., June 23rd, 1921.

P. Philip, Esq.,
Public Works Engineer, Victoria, B.C.

SIR,—I have the honour to submit my annual report for the fiscal year ending March 31st, 1921.

The closing of this year marked undoubted progress in the work generally, despite the prevailing difficulties attributed to high wages and cost of materials, labour unrest, and inclement weather conditions. The season's programme was carefully laid out, but for reasons stated above it was not found possible to carry it to completion.

For instance, regarding cost of materials, at the commencement of the year horse-food was worth $75 per ton in Prince George and by the time it reached the job the cost became almost prohibitive. Other prices were more or less in proportion, but fortunately prices dropped considerably toward the height of the season.

The use of the large Yuba caterpillar tractor provided for this district offset this cost to some extent, the machine being used almost continually for grading and hauling purposes until the work closed down. Without this machine it would have been impossible to have carried out the heavy regrading accomplished.

The installing of additional equipment such as this is becoming more essential every year if the fullest advantage is to be gained for every dollar expended.

Steam-shovel in clay cut, Colleymount Road, Omineca. Day-labour.

Mechanical loader at work in gravel-pit. Day-labour.

UNIVERSITY OF ILLINOIS LIBRARY

Roads.—The policy of especially caring for main trunk roads was energetically carried out as far as funds would permit, much good work in the way of permanent improvements being commenced.

Federal Aid, Project No. 16, Cariboo Road, Sections A and C, Hixon Creek to Summit Lake, received prime attention, a contract having been let for slashing the right-of-way over Section A a distance of some 42 miles between Hixon Creek and Prince George. With this work completed there is every opportunity of carrying out the grading-work along the entire section. In the vicinity of Prince George, on this road, a large amount of heavy grading and filling became necessary on account of high-water conditions, the major portion of the work being handled to advantage by the Northern Construction Company, contractors for the Pacific Great Eastern Railway. On Section C, Fort George to Summit Lake, some important improvements were carried out by day-labour, the entire road becoming available for auto traffic for the first time.

The Fort George–Hazelton Trunk Road was much improved in the vicinity of Prince George, Vanderhoof, and Fort Fraser. As this road is included in the Federal-aid programme, a considerable amount of revised location will be necessary, the work at present being confined to sections which are considered to be on permanent locations.

Land-settlement Work.—Three land settlement areas have been opened up in this district—two in the Nechako Valley, at Vanderhoof and Marten Lake, and one at Prince George.

The Prince George Area is served by the main trunk road to Quesnel, which gives excellent general egress, and several miles of side-roads were opened up to connect with this main artery, whereby nearly every quarter-section taken is provided with an outlet. The work herein carried out consisted principally of slashing and grubbing where necessary, improvements being made as funds permitted.

Through the Vanderhoof Area a good general road was opened, to which side-roads were connected for those who had taken up holdings. As evidenced by all the settlers, this policy is working very satisfactorily.

Side-roads.—A large mileage of side-roads to outlying sections has been commenced from time to time throughout this district, and where conditions warranted and funds were available small improvements were made.

On account of the extremely wet weather experienced during the months of August, September, and October, a great deal of damage was done, proving somewhat detrimental to those who had any hauling to do.

Substantial improvements were carried out in the vicinity of McBride, the main streets being well ditched and graded, and the road east on the north side of the Fraser River cut through to the Beaver River.

In the Vanderhoof and Fort Fraser Districts the work chiefly consisted of repairs, although a few short extensions to existing roads were made.

A new short cut from the town of Vanderhoof to the main Fort George–Hazelton Road was opened up for the benefit of settlers in the Mapes and Hulatt Districts, reducing the distance by 2 miles. This road was only partly completed.

Peace River District.—The main roads in the Pouce Coupe District were substantially improved, especially where the grades over the deep ravines had cut the prairie in so many places. Several miles of road allowances were opened up for the benefit of new settlers, and in the outlying parts of this section and at Hudson Hope improvements on the existing roads, in the way of reducing grades, etc., were undertaken.

Bridge-work.—During the season a large number of small structures were repaired or renewed throughout the district. Little trouble was experienced from spring wash-outs, with the exception of the Cutbank River Bridge, in the Peace River District, unprecedented weather conditions being entirely responsible for this damage. The principal structures of importance constructed during the season were the Fraser River Bridge at Dunster and the Cutbank River Bridge in the Peace River District. The work was done during the winter months, in both cases being carried out by day-labour. The former consists of two 130-foot Howe-truss spans with trestle approaches. Excellent work is to be found in every detail of this construction and with proper maintenance it should last for many years.

In replacing the Cutbank Bridge a new design was decided on—viz., one 100-foot Howe-truss and two 40-foot King trusses with pile piers. This work, which was completed in March, has not

been inspected to date, but from photographs received it has every appearance of being a well-finished job.

A King-truss bridge was erected over Beaver River on the new McBride–Dunster Road.

Ferries.—The ferry on the Fraser River at Dunster has been eliminated on account of the erection of the bridge, and marks the third ferry to be so replaced during the past four years.

All the remaining river crossings have been well maintained, and as the traffic at some points appears very small, it will no doubt be some time before any further replacements with bridges become warranted.

Generally.—As previously mentioned, the working season was much hampered by wet weather, and the labour question being so acute, several small matters had to remain in abeyance, but with the difficulties involved a very fair showing was made.

The continued unfailing interest at all times shown in the work by the general foremen and staff, together with the excellent support and encouragement received from headquarters, has gone a long way towards creating the efficiency which has been obtained.

All of which is respectfully submitted.

ARTHUR DIXON,
District Engineer.

REPORT OF ENGINEER, DISTRICT No. 9.

DISTRICT ENGINEER'S OFFICE,
QUESNEL, B.C., June 9th, 1921.

P. Philip, Esq.,
Public Works Engineer, Victoria, B.C.

SIR,—I beg to submit my report for year 1920–21 for this district, comprising Cariboo and Lillooet.

Labour Conditions.—In the Lillooet section conditions were normal, but difficulty was experienced in obtaining labour in Cariboo even at greatly increased rate of pay. Although farmers in the district were offering $5 a day and board for farm-hands, the demand was greater than the supply. This state of affairs increased the cost of all work and prevented much-needed improvements.

Weather Conditions.—Much damage was done in Lillooet District by cloudbursts in July. The excessive rains in Cariboo practically suspended heavy traffic on earth roads and caused many mud-slides and other damage. The winter was, however, mild and the snowfall average.

Roads and Trails, Lillooet District.—The most important works undertaken were gravelling Cariboo Main Road, Mile 26 to Mile 34, and widening and reconstructing Bridge River Road. A supply of "Armco" culverts was obtained and used on the main road, displacing old pole culverts. Woods Box–High Bar Road was rebuilt after being entirely destroyed by cloud-burst. Connections to Pacific Great Eastern Railway were made at Exeter and Lac la Hache. Grade improvement was effected at 9-Mile Gulch–Lillooet–Clinton Road.

Cariboo District.—A great deal of work was done in an effort to keep the main roads open to traffic during the extremely wet year.

The Cariboo Main Road, Mile 211 to Mile 218, was gravelled in sections, but a considerable amount remains to be done at this point before it is fit for the heavy auto traffic. Work was done on the Quesnel–Fort George section, building that portion near Little Cottonwood and making the road passable to Strathnaver. One mile of gravelling was completed on Chilcotin Main Road at Borlands Mountain. The grade at west approach to Soda Creek Ferry was improved. The usual maintenance and repairs to roads and trails were carried out throughout the district.

The advent of the Pacific Great Eastern Railway is causing a change in direction of travel, and on this account demands for new roads are very numerous. It is interesting to note that the past winter was the first in the history of the Old Cariboo Road during which no mail-stage operated, and in many parts the snow remained unbroken during the entire winter.

Ferries.—The ten ferries throughout the district were maintained in a satisfactory condition. A new ferry was built at Woodjam and the towers and cable were erected at Macalister.

Tractor and grader working on Cariboo Road, clearing off material deposited by cloud-burst.

Project 16, Section A, Cariboo Road, Fort George–Hixon Creek. Looking south, Mile 14; new construction by contract.

UNIVERSITY OF ILLINOIS LIBRARY

Bridges.—During high water in the Quesnel River the bridges at South Fork and Quesnel were damaged, repairs being effected and the structures made safe. A rock-covered brush-mattress protection was constructed at Quesnel Bridge, where serious bank-erosion is taking place each year during high-water. This protection will require to be extended each year until proper protection is given. Bridges throughout the district were repaired and maintained.

General.—A few minor contracts were awarded for both roads and bridges; these were found to be satisfactory and it is the intention to continue minor contract work whenever possible. A "Cletrac" tractor was used for the first time on grader-work in Lillooet District and proved economical and effective. Towards the end of the fiscal year changes were made in the organization which will lessen the cost of supervision and increase efficiency.

Respectfully submitted.

G. C. MACKAY,
District Engineer.

REPORT OF SUPERVISING ARCHITECT.

DEPARTMENT OF PUBLIC WORKS,
VICTORIA, B.C., March 31st, 1921.

P. Philip, Esq.,
Public Works Engineer, Victoria, B.C.

SIR,—I have the honour to submit the following report for your consideration of the work carried out by this Branch during the fiscal year ending March 31st, 1921:—

The year has been one of activity and it has been necessary to obtain the services of two extra assistants in a temporary capacity. They have considerably strengthened the staff and enabled the work to be carried out more expeditiously, and at the same time allowed other members to make the necessary tours of inspection of the work so essential during building operations.

Parliament Buildings.—These buildings have undergone considerable changes during the year, and a start has been made in systematically going over the same and kalsomining and painting the entire building. Also, on the report of the Inspector of Electrical Energy, a start has been made on rewiring the older portion of these buildings to take care of the additional load placed on them and to comply with the Fire Underwriters' requirements, and thus reduce our insurance rate.

Provision for the enlargement of the Museum was commenced by providing a basement to give the Curator fire-proof storage and exhibition room for his relics now stored in the temporary building adjoining the Museum.

The roof and parapets have been thoroughly overhauled and left in good condition. I might mention that the whole of these works have been carried out by the tradesmen of this Department.

Also considerable work on furniture and other repairs were made for other departments whose expenditure was not controlled by our vote.

The Statue of Queen Victoria was completed during this year and the grounds improved under Mr. Partington's supervision.

Government House.—Considerable alterations and repairs have been carried out to this building which have become necessary through general wear and tear and to accommodate the new Lieutenant-Governor. Improvements were made to the grounds, greenhouses, etc.

Other Government Buildings, Victoria.—Repairs to roof and interior decorations have been effected at the Court-house, Victoria.

Minor repairs and decorating were done at the Normal School and a scheme prepared for laying out the grounds, a portion of which was completed, including blasting away the large mound of rock in front of the building without even cracking a window, and a new tennis-court and hockey-field were made. I wish to bring to your attention the assistance given me by Mr. Partington in supervising this work, which was a complete success, and has made a huge difference to the appearance of these buildings.

Hospitals.—Much new work was carried out at the various Mental Hospitals in the Province. At New Westminster, besides the general repairs and upkeep, a new Nurses' Home has been erected and equipped and new concrete sidewalks put around the main approach to the building.

At Essondale, beyond the general maintenance and repairs, an addition has been placed to the temporary annex at the Colony Farm for seventy-five patients. A new shops building has also been erected and six houses erected as part of a colony scheme for attendants at this institution.

The Saanich Mental Hospital had several improvements and repairs made to accommodate the increased number of patients housed at this institution. These buildings were erected by the institution's own men under our direction, this Branch having provided plans and bills of quantities for same.

Sketch-plans were also prepared for a Memorial Hospital at Armstrong and sundry assistance given to various Hospital Boards.

Boys' Industrial School.—The actual work on construction of these buildings was commenced this year and are now well under way, but the very inclement weather has considerably delayed the work. Your attention is particularly drawn to the good work done by the staff and patients of the Mental Hospital, Essondale, who carried out all the excavations, road-cutting, foundations of the buildings to ground-level, heating and electrical installations, at a considerable saving in money to the Government in labour.

Court-house, Prince Rupert.—The plans for this building were completed during this year and the contract awarded, but the actual start on construction will not occur until the coming fiscal year. I would like to bring to your notice that this is the largest building contemplated during this period in the Province.

Oakalla Prison Farm.—Beyond the general repairs and maintenance, a new house for the Warden is being erected by inmates and tradesmen of this institution, this Department having supplied plans and bills of quantities for all work, and a very creditable building is being erected, particularly with the many disadvantages under which they have to labour.

Vaults.—Plans for sundry vaults were made for various minor agencies, but owing to the lateness of the season only one has been completed.

New Court-houses.—Plans were prepared for new Court-houses at Pouce Coupe and Williams Lake, but the work on construction was delayed for the coming year.

Gaols.—Plans were prepared for new gaols at Clinton and Kelowna, but the work on construction deferred to a later period, whilst considerable repairs and alterations were made to existing buildings.

Schools.—The actual work of construction was commenced on the new twelve-room consolidated school at Armstrong, which is progressing very favourably and an excellent piece of work being performed.

The following rural schools were also erected: Eight rooms, 1; four rooms, 2; three rooms, 1; four rooms, 3; one room, 2; four-room addition, 1; three-room addition, 1; two-room addition, 1.

Plans were also prepared for one four-room addition and two one-room additions that were not carried out this fiscal year, whilst many minor repairs were done to existing schools, and the alterations made to the old Labour Temple, Vancouver, to transform it to the new Technical School. Sundry repairs were made to the Normal School in Vancouver.

Government Agencies.—The maintenance and repairs to the various agencies were carried out by this Branch, but beyond Vancouver and Rossland no very great expenditures were made.

Other Buildings.—An addition was made to the Mine-Rescue Station, Fernie; Labour Bureau, Vancouver; whilst a new barn was erected at the Girls' Industrial School, Vancouver, and the grounds all cleared, grubbed, and ploughed, and general repairs to the building made. General maintenance and repairs were made to the Old Boys' Industrial School at Point Grey and Old Men's Home, Kamloops.

Additional pheasant-pens were erected at Colquitz and Cedar Hill and alterations to the Liquor Vendor's Store in Vancouver.

A general period of high prices prevailed during this fiscal year, but there is a distinct sign that the decline in prices is in view, which will reduce the cost of our buildings to a considerable extent.

I wish to thank you, sir, and the Deputy Minister for your interest and advice in the work of this Branch, also thank all members of the staff and tradesmen for their loyalty and co-operation in carrying out the works assigned to them.

Photos of some of the more prominent buildings carried out during this period are attached hereto.

Boys' Industrial School, Essondale, near New Westminster. Excavation-work.

UNIVERSITY OF ILLINOIS LIBRARY

Below is a statement of the cost of carrying out the work of this Branch with the percentage of cost on the work executed, but is exclusive of office-rent, light, and water. This, however, I consider more than offset by matters that have been done by the Branch, of which no particular note of their value has been kept, and the personal knowledge I have of the various Government buildings and institutions which makes it possible for me to provide the Department with information which otherwise they would have to pay for.

Salaries of staff, including Stenographer	$10,045 00
Paper, stationery, prints, etc.	750 00
Total	$10,795 00

Total value of work done during this year on which architects' fees could be charged is $703,511, thus showing the cost of operation of the Branch is only slightly over 1.5 per cent., which is a very low percentage when taking into consideration the class of buildings erected during this year.

All of which is respectfully submitted.

HY. WHITTAKER,
Supervising Architect.

REPORT OF SUPERINTENDENT OF BRIDGES.

DEPARTMENT OF PUBLIC WORKS,
VICTORIA, B.C., September 6th, 1921.

P. Philip, Esq.,
Public Works Engineer, Victoria, B.C.

SIR,—I have the honour to submit the following report for the fiscal year 1920–21 on bridges, ferries, and river-bank protection:—

During this period 314 bridges were inspected. In each case individual reports were submitted to the Department, in which recommendations for repairs, renewals, etc., were set forth as occasion required.

Only the more important structures or those known to be in need of renewal or repair were examined. The maintenance of the bridge-work generally throughout the Province has been promptly executed by the several officers responsible, and with very few exceptions has been carried out in a workmanlike manner. Where new structures have had to be undertaken, careful investigation followed by accurate surveys has gone far towards an improvement in the carrying-out of our work. Tenders have usually been called for, and where the bid has been reasonable the work has been let by contract, which, with competent inspection, has given good results.

The cost of all materials used in repairing existing bridges and the building of new structures has never been higher than during this fiscal year. New construction has therefore when possible been postponed, and as a consequence the Department has exercised a good deal of ingenuity in devising means for carrying some of the latter bridges until the price of materials has dropped to a reasonable level. Such work, however, is merely temporary, but the cost entailed has in every instance been justified.

We have found, generally speaking, that the life of timber bridges is in the neighbourhood of from ten to fourteen years, though there are instances where the life has been considerably less and considerably more, the maximum range being from eight to twenty-two years. As a consequence of our policy of bridge reinforcement, it must be realized that more liberal appropriations will have to be provided in future years to allow of the replacement of structures temporarily reinforced during this and the preceding fiscal year. This will be a charge in addition to the normal replacements which will have to be undertaken.

As to new construction, it will be clearly understood that the cost of this will be in some proportion to the total mileage of new roads built as required by rural development.

Generally speaking, the weakest feature of our highway system is our bridges. As a consequence of the very great increase which has recently taken place in the volume, weight and speed of our highway traffic, we are faced with the dilemma of either having to limit the weight and speed of vehicles upon the highways or be prepared to face a large bill of cost to allow of

the bridges being reinforced or rebuilt to meet the new conditions. A similar situation is being faced in the rest of North America and Europe. You will note by official publications the steps which are being taken to overcome this difficulty in these countries.

The Department has recently made several innovations in connection with bridge designs. These will go far toward increasing the strength of bridges without any material increase in the cost of construction, and, further, will greatly prolong the life of all our timber structures. This has been done largely by the use of steel and iron clamps, keys, and packing in built-up members in lieu of the wooden blocks, etc., used heretofore.

We have also adopted a system of covering the more important members of framed structures with galvanized sheet iron as a protection both from the weather and fire.

The Department has also carried on a systematic inquiry as to the cause of decay in timber, and by a rearrangement of the various members in bridges and a redrafting of the specifications we have evolved designs to meet the new knowledge which we feel confident will very materially increase the normal life of our timber structures, particularly in wet localities.

We have made experiments with various types of flooring upon bridges subject to excessive traffic, and as far as we have been able to go at present it would seem that a considerable economy can be effected in many places by the use of an asphaltic mat laid directly upon a timber deck. It will take some time, however, to determine the life of this mat, so that a direct comparison can be made with the ultimate difference of cost between an asphaltic mat and a timber floor.

In renewing bridges upon highways subject to heavy travel where the location has been decided upon beyond all future dispute, we have adopted a policy of constructing concrete foundations to provide for the steel structures which will ultimately have to replace the timber bridges now being built.

With reference to suggestion of replacing our wooden bridges by steel structures, I may say that British Columbia is in the most fortunate position of possessing large supplies of the strongest and most durable timber of highest quality, and these may be secured now at a price (taking the ultimate life of the materials into account) which compares favourably with steel. We have made careful inquiry into the whole situation, and are satisfied that until the price of timber is considerably advanced we would not be justified normally in adopting steel in lieu of timber, though undoubtedly there are some instances where this will have to be done soon. As a further economy we have gone carefully into the question of replacing, where possible, timber structures by earth fills and concrete culverts. In many cases we have been able to make a very considerable ultimate saving by this.

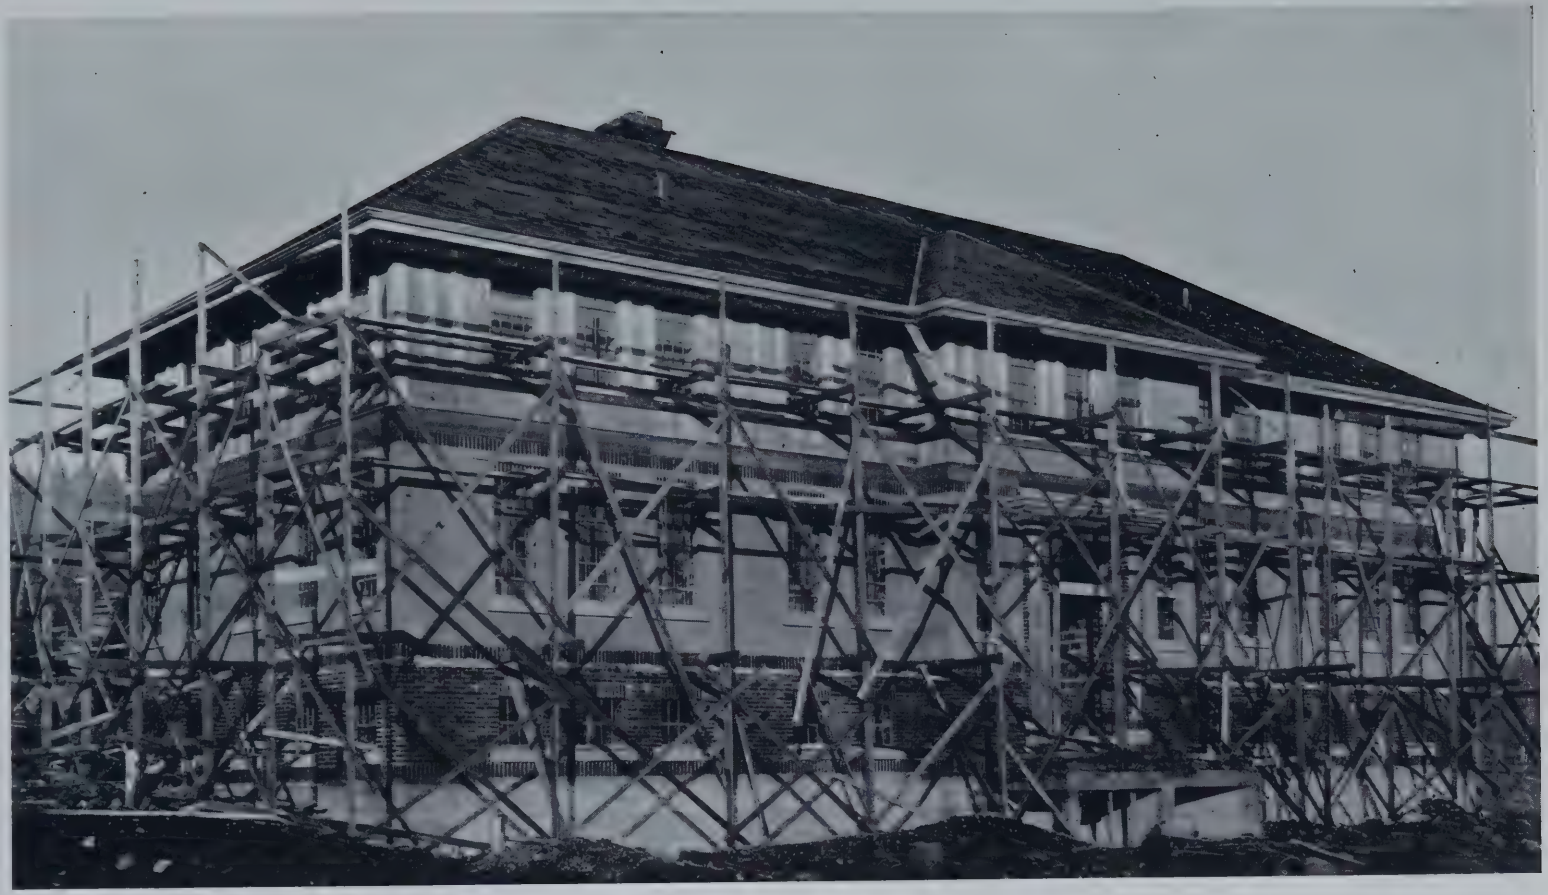
During the fiscal year I have also inspected the more important ferries throughout the Province and the approaches leading thereto, and I have found that in general they have been well kept up and have provided good and adequate service.

As far as public works are concerned, little serious damage has been caused during this year by flood and erosion. We have, however, where public works have been effected, had to undertake certain river-bank protection, and an innovation has been made in this connection by the use of concrete slabs connected by steel-wire rope. This design is the outcome of the accumulated experience of many eminent engineers who have devoted their time solely to this class of work, and as far as our experience has gone this type of construction justifies the cost entailed.

In conclusion, I have to report that the work performed by the various officers of the Department responsible for the construction and maintenance of bridges, ferries, and river-bank protection as performed during the year 1920–21 has been of a high order.

Respectfully submitted.

T. KILPATRICK,
Superintendent of Bridges.



Boys' Industrial School Cottage, Essondale, near New Westminster.

UNIVERSITY OF ILLINOIS LIBRARY

REPORT OF MECHANICAL ENGINEER.

DEPARTMENT OF PUBLIC WORKS,
VICTORIA, B.C., June 30th, 1921.

P. Philip, Esq.,
Public Works Engineer, Victoria, B.C.

SIR,—I beg to report to you regarding the plant and machinery, automobiles, boats, etc., in possession of the Department during the year 1920–21 as follows:—

Plant and Machinery.—Under this heading is included all machinery and mechanical appliances used in the work of the Department in the various engineering districts, the following table showing the number of each of the larger machines in use:—

Compressors	4	Donkey-engines	13
Concrete-mixers	2	Oiling-machines	3
Engines, gas and steam	10	Road-graders	197
Hoists	20	Road-ploughs	357
Pile-drivers	17	Road-rollers	12
Pumps	7	Rock-crushers	11
Tractors, traction-engines	23	Painting-machines	1
Steam-shovels	1	Steam-wagons	1
Dredges	1		

Of the above, all are in good condition and are ready for work during the 1921 season.

At different times throughout the year I have inspected most of the plant, in many instances several inspections having been made. Detailed reports of such inspections have previously been submitted. Information is now complete concerning various machines stored at places in the Province, particulars of which were not hitherto available. Some of these machines have been transferred to other districts where they are likely to be more serviceable, while a few others have still to be dealt with.

Generally, the plant and machinery is in good condition, almost all of it being under cover or otherwise protected from the elements. Suitable sheds have been constructed at different points for housing all road equipment when not in use.

Automobiles, Trucks, and Garages.—Altogether there are in the Works Department thirty-six automobiles and forty-seven trucks. The former are of different makes and capacity, but as each replacement or new car is usually either a five-passenger Ford or seven-passenger McLaughlin, in time the cars will be fairly well standardized. I have inspected all these cars during the year, and, excepting for a few old ones, they are in good serviceable condition considering the continuous hard work to which they are subjected.

Naturally the average mileage per car varies considerably throughout the Province, depending upon weather conditions, the nature of the road-surface and the grades encountered. The records show that the cars were generally efficiently operated.

Trucks.—Trucks are gradually supplanting teams in the districts where they can be continuously and economically employed and where suitable teams are not available. At present there are several sizes and makes of trucks, such as Ford 1-ton National and Federal 2½-ton. The Federal truck in particular has given splendid satisfaction, the maintenance cost having been very low and the operation cost normal. The universal transmission that has been fitted to some of the Ford trucks where heavy grades are encountered has proved both efficient and economical.

All the trucks have been inspected, and I find they are in most instances carefully used by the men in charge, particularly when the driver is kept steadily employed on the same vehicle. I should like to emphasize the importance of employing only fully qualified drivers, particularly for the large trucks, so that the operating and maintenance cost can be kept as low as possible.

Garage Facilities.—Except at headquarters, no proper facilities are provided where automobiles can be inspected and repairs undertaken, and consequently the service rendered at some places is not so good as it should be. The plans now under way for the erection and equipment of serviceable garages at one or two of the central points should, however, remedy such existing drawbacks.

Ferries.—With the exception of the ferries on the Lower Mainland under the Chief Inspector of Machinery's jurisdiction, all the power-ferries were periodically inspected and any necessary

renewals or repairs were attended to as soon as possible thereafter. Many of the scows equipped with mechanical power have been materially improved and their serviceability thereby greatly increased. Ferrymen have been instructed as to the proper oiling and care of equipment, with marked satisfactory results. Special attention was given to the ferry at Sorrento–Scotch Creek. A new boat and scow has been provided for this service, equipped with a 16-horse-power, heavy-duty engine made in British Columbia, and has given entire satisfaction.

The engine in the ferry launch on Francois Lake, formerly the source of much trouble and expense, was repaired and materially improved. This boat has, however, outlived its usefulness and the proposed new one will be urgently required to cope with the rapidly increasing traffic in this neighbourhood.

The Nelson Ferry will also be greatly improved when the new boat is introduced. The power-ferries gave generally good service during the past year.

Launch "I'll Away."—This boat has been in almost continuous service throughout the year in the Vancouver Island and Lower Mainland Districts. The engine, which was very old and had given considerable trouble, has been replaced by a new and reliable engine, made in British Columbia, of the heavy-duty type. Although only 16 horse-power as against the 30 horse-power of the old engine, it is operating without trouble, and with a considerable economy in fuel-consumption without loss of speed or power.

General.—I have made inspections of boats and launches for other Government departments during the year and reported direct to the department concerned.

It is, in my opinion, of great advantage to standardize as much as possible the types of all plant and vehicles to facilitate repairs and the stocking of new parts.

In my inspection-work I had the willing assistance of the District Engineers and their assistants, who are all eager to co-operate towards providing the best possible returns from the use of the various classes of machinery and plant.

Respectfully submitted.

J. ARMSTRONG,
Mechanical Superintendent.

Houses built under soldiers' housing scheme, South Vancouver.

REPORT OF CHIEF INSPECTOR OF MACHINERY.

NEW WESTMINSTER, B.C., April 1st, 1921.

The Honourable the Minister of Public Works,
Victoria, B.C.

SIR,—In accordance with the provisions of the "Boilers Inspection Act," I have the honour to submit to you the Nineteenth Annual Report of the operation of the steam-boilers and machinery inspection service for the year ending March 31st, 1921.

The personnel of the service at present consists of the Chief Inspector, twelve District Inspectors, one clerk, one stenographer and filing and record clerk, and three stenographers, located as follows: Chief Inspector, four Inspectors, one clerk, one stenographer and filing and record clerk, and one stenographer and typist at the head office in New Westminster, including Districts A and E, one of the Inspectors being employed most of the time in District E; three Inspectors and one stenographer and typist in Victoria for District B; one Inspector in Nelson for District C; three Inspectors and one stenographer and typist in Vancouver for District D.

During the year the following changes of staff have taken place: Miss Archibald, typist and stenographer at the head office left the service on July 19th, 1920. Miss R. G. Eddy was appointed to fill the vacancy on July 26th, 1920. John O'Neill was appointed Inspector on September 8th, 1920, to fill the vacancy caused by the resignation of P. A. Goepel, Mr. Goepel having resigned on August 30th, 1919.

The following is a summary of the routine work performed in the office of the Chief Inspector during the year, exclusive of inspections, engineers' examinations, and the work of engineer surveying, details of which will be found in the reports of the Inspectors for the different districts and that of the Chief Engineer Examiner:—

Letters inward	6,935
Letters outward	8,473
Telegrams inward	49
Telegrams outward	45
Inspectors' monthly reports examined	144
New designs examined, calculated, and reported on	130
Amendments to designs examined, calculated, and reported on	49
Fees collected for designs	$790.00
Fees collected for infractions of Act	$300.00
Number of miles travelled by Chief Inspector	5,410

I have to report one boiler-explosion during the year. This occurred at about 8.15 a.m. on March 19th, 1921. The boiler, No. 30488-B.C., is owned by the Jewell Lumber Company and is located at their sawmill at Caithness. Two persons were slightly scalded.

The boiler is of the locomotive type, 48 inches in diameter, 16 feet 9 inches long. It was built by the Waterous Engine Works Company at Brantford in December, 1906, and was allowed a working-pressure of 120 lb. The nature of the explosion was as follows:—

The crown-sheet of the fire-box, which measures 50½ by 41½ inches, collapsed. The crown-sheet and the sides of the fire-box were supported by direct-screwed stays riveted over at each end in the usual manner. The sheet was forced off the whole of the crown-stays as well as most of the upper row of stays on the sides and fire-box end. The tube-sheet was also forced off the upper row of tubes, but fortunately the crown-sheet did not rupture, and on account of this the steam escaped more or less gradually through the stay-bolt holes, so that the only damage done was the blowing-down of the Dutch-oven walls, which were then below the fire-box.

The cause of the explosion was the overheating of the crown-sheet due to the shortness of water. The sheet first bulged between the stays until bending was sufficient to allow the stay-bolt heads to pass through the holes in the crown-sheet.

Our Mr. Sutherland was notified of the accident, and at once proceeded to Caithness to make a preliminary examination. The condition of the crown-sheet made it quite clear to him that the collapse was due to shortness of water. As both the engineer and fireman were positive

as to there being several inches of water showing in the glass just a few minutes before the explosion, he at once came to the conclusion that the water-glass was not in proper working-order. He had the water-glass cut, and upon unscrewing the bottom gland nut in the presence of the engineer and several other parties, he found that the glass had not been properly fitted. A rubber washer which should have been around the glass and above the recess in the fitting was found to be at the bottom of the recess, with the water-glass resting on the top of the rubber, thus almost entirely blocking the passage from the boiler to the water-glass. The glass was put in by Mr. Somerville about six weeks before the accident, and when first put in no doubt allowed, on account of the clean-cut hole in the washer, of the water passing back and forth from the boiler to the glass, but as the rubber deteriorated it spread over the opening in such a way as to act like a check-valve, allowing the water to pass from the boiler to the glass without much opposition, but when the level was falling in the boiler the pressure on the top of the rubber closed it down on the shoulder of the recess, thus closing the aperture. This would, of course, account for water showing in the glass just before the accident, while the crown-sheet was dry and red-hot.

The next point to which his attention was directed was the fusible plug. Why had it not melted and the noise of the escaping steam been detected by the engineer and fireman when they were so near the boiler? On examining the fusible plug it was found to have been made in such a way that it should never have been used for the purpose.

A properly constructed fusible plug is made in the following manner: The body is of brass, usually ¾ or 1 inch in diameter, about 2¼ inches long, having a hole through the centre ¾ inch on the inside and ½ inch on the outside. This taper hole is filled with tin having a melting-point of between 400° and 500° F. The plug should project about 1 inch into the water-space, so that before the crown-sheet is bare the cooling effect of the water on the plug is lost. After it gets below the inner end of the plug the fusible metal melts and steam at boiler-pressure escaping through the ½ inch gives the alarm and can be heard at considerable distance from the boiler.

A correct type of plug had been in use in the boiler, but the engineer had screwed it in from the inside instead of from the outside, the taper thus being the wrong way, the end of the plug projecting through the sheet a considerable distance and therefore becoming heated, and between the slight heating of the plug and pressure of steam on the small end of the taper the fusible metal was blown out on three occasions. The fusible plug in use at the time of the explosion was put in on December 28th. It was made by drilling a ½-inch hole part of the way down the plug and a 3/16-inch hole the remainder of the distance, and filled with fusible metal, the larger diameter of the metal being in the inside of the boiler. When the temperature of the plug raised to a point sufficient to melt the fusible metal, part of it was blown out through the small opening on the outside. There was, as usual, a certain amount of impurities in the fusible metal having a very high melting-point. This dross was driven into the small hole, stopping it up completely. This stoppage might also be assisted by a certain amount of scale, which might have been on the inside surface of the plug.

The large taper hole in a properly constructed fusible plug is for the purpose of ensuring that immediately the fusible metal commences to melt, the whole of it, with any impurities that may have been adhering to the inner surface of the metal, shall be blown out.

The number of accidents to persons and machinery are fully set forth in the District Inspectors' reports.

It will be noted that there was one accident resulting in personal injury, not fatal. This accident occurred when the above-mentioned boiler exploded. The first and second engineers were slightly scalded.

Under "Summary of Defects," it will be seen that eleven safety-valves were found to be inoperative and eight overloaded. Sixty pressure-gauges were inoperative and 350 defective.

The number of new boilers built for British Columbia was 113 as compared with sixty-four the previous year; sixty-seven of these were built in British Columbia, nine built under inspection in Eastern Canada, nineteen built in Eastern Canada not under inspection, and twenty-eight built in the United States. Of these, 113 were put in operation during the year, the remainder being held in stock.

The number of second-hand boilers imported was twenty-seven; from Eastern Canada twenty-three, as compared with eleven during the previous year; and four from the United States, as compared with six of the previous year.

Boilers inspected for the first time during the year number 128; twenty-one were taken out of service, being condemned as unfit for further use.

The total number of boilers now on our books is 6,224. Of these, 2,840 were inspected internally and externally, forty-one internally only, and 354 were inspected externally only.

The number of plates tested during the year was 259, as compared with 389 the previous year. Three plates were rejected as unfit for use in boiler-construction, as compared with seven the previous year.

In addition to the usual work of this office, we have during the year undertaken extra work as follows: Supervised repairs on Ladner–Woodward, the Mission–Matsqui, and Agassiz–Rosedale Ferries; supervised repairs and operation in connection with steam plants in Government buildings; and carried on inspections for the Workmen's Compensation Board. The summary of inspections and safety orders made is attached hereto.

Appended you will find a summary of the total work done by all of the District Inspectors as well as their separate reports, together with a summary of the work done for the Workmen's Compensation Board.

In conclusion, I desire to thank you for your active interest in support of this office, and also to thank the members of the staff for the efficient manner in which they carried out their work during the year.

Trusting this report will meet with your approval,

I have, etc.,
JOHN PECK,
Chief Inspector.

JOHN PECK.
Chief Inspector of Steam-boilers.

Report of the Chief Examiner.

NEW WESTMINSTER, B.C., April 1st, 1921.

The Honourable Minister of Public Works,
Victoria, B.C.

SIR,—I have the honour to submit to you the following report with respect to examinations of candidates for engineers' certificates for the year ending March 31st, 1921:—

During the year I have received 1,192 applications for examination for the different grades of certificates.

On March 31st, 1920, I had on hand 177 applications, making a total of 1,369. Of these, 1,027 have been examined; 174 applicants have had their fees returned, as their testimonials did not show the necessary service qualifications required by the Act. This leaves on the "Accepted for Examination" file 168 application forms.

RESULTS OF EXAMINATIONS.

Class.	No. examined.	Passed.	Failed.
First	7	3	4
Second	57	32	25
Third	233	155	78
Fourth	409	294	115
Special logging-donkey	120	98	22
Special creamery	9	8	1
Special heating	55	52	3
Special Doukhobor	2	2	..
Special road-roller	3	3	..
Special threshing	1	1	..
Temporary	131	131	..
Totals	1,027	779	248

Examination fees collected by Chief Inspector	$3,555 00
Examination fees collected by other Inspectors	207 50
Duplicate certificate fees	67 50
Total	$3,830 00

Trusting this report will meet with your approval,

I have, etc.,
JOHN PECK,
Chief Inspector.

Senior Inspector's Report, District A.

NEW WESTMINSTER, B.C., April 1st, 1921.

John Peck, Esq.,
Chief Inspector of Machinery, New Westminster, B.C.

SIR,—I have the honour to submit herewith my annual report for the year ending March 31st, 1921.

During the year my work has been mostly confined to the routine of the head office; engineers' examinations; examining and figuring designs for new boilers and fittings; and attending to work of other departments, such as ferries, launches, and public buildings.

The design-work has been considerably augmented by the submitting of drawings of air-tanks and other pressure-vessels for approval to comply with the Workmen's Compensation Board requirements. In the ensuing year this work will be greatly increased owing to all existing designs having to be resubmitted for approval under the "Interprovincial Regulations."

Engineers' examinations were held monthly and occupied all of the first week in each month. Work for other departments, such as ferries, launches, and public buildings, absorbed 20 per centum of my time.

Three investigations were held during the year. A reported defective fly-wheel turned out to be a false alarm, as the fly-wheel was found to be perfectly sound. The second one was the wrecking of the main engine at the Bucklin Lumber Company's mill. The bolts in the connecting-rod end parted, allowing the piston to strike the head, thereby smashing the latter and generally wrecking the engine.

The third investigation was into the cause of the bursting of a fly-wheel at Thurston & Flavelle's mill at Port Moody. This was on a Corliss engine, which was greatly overloaded. In an endeavour to make the engine stand up to the work a former engineer had removed the steel knock-off cams and replaced them with shorter ones made of friction-paper. These had in time worn still shorter, so that at no load and the governor at its highest position the pick-up block could still engage with the valve-lever. While the main belt remained intact, the friction load of the mill was sufficient to hold the engine down to a reasonable speed, but when the belt broke, as happened on this occasion, sufficient steam was admitted to the cylinder to cause excessive acceleration of the engine and consequent bursting of the wheel. Though the material damage in the two latter cases was very considerable, luckily no one was injured.

Appended is further details of the work done.

Trusting this report meets with your approval,

I have, etc.,
JOHN D. KAY,
Senior Inspector, District A.

REMARKS.

Held general examinations every month and special examinations at intervals.

SUMMARY OF WORK DONE IN DISTRICT A FOR YEAR ENDING MARCH 31ST, 1921.

Number of drawings and specifications calculated for new boilers	167

WORK DONE FOR OTHER DEPARTMENTS.

Work in connection with the ferry-boats "Beaver," "Eena," and "John H. Sprott," 37 days; inspecting launches, etc., for other departments, 8 days; time spent in designing apparatus for coal and ash handling at Royal Columbian Hospital, 7 days; total time, 52 days. Investigations for the Workmen's Compensation Board, 2.

JOHN D. KAY,
Senior Inspector of Steam-boilers, District A and Head Office.

Inspector's Report, District A (South).

NEW WESTMINSTER, B.C., April 1st, 1921.

John Peck, Esq.,
Chief Inspector of Machinery, New Westminster, B.C.

SIR,—I have the honour to submit my report for the year ending March 31st, 1921.

I am pleased to say that no explosions of boilers or any serious accidents have occurred in my district during the year.

When not employed in the office on the examination of candidates for engineers' certificates or other office-work, I have been out on boiler inspections, where each plant was also inspected by me under the the Workmen's Compensation Board, and, generally speaking, I have found the managers quite willing to carry out "safety" orders for the better protection of the workmen.

Trusting the enclosed report will meet with your approval,

I have, etc.,
A. S. BENNETT,
Inspector, District A (South).

A. S. BENNETT,
Inspector of Steam-boilers, District A (South).

Inspector's Report, District A (North).

NEW WESTMINSTER, B.C., April 1st, 1921.

John Peck, Esq.,
Chief Inspector of Machinery, New Westminster, B.C.

SIR,—I have the honour to submit to you my report for the year ending March 31st, 1921.

One boiler was considered unfit for further service, otherwise the different plants were found to be generally in a satisfactory condition.

There were three accidents to engines, but in no instance was there any one injured. In one case a fly-wheel burst. A full account of this accident is given by the Senior Inspector.

One accident was caused by the piston-rod breaking where it screws into the cross-head. The cylinder was badly cracked and therefore condemned.

The third accident was caused by the breaking of a bolt holding the crank-pin brasses. The damage was not extensive, but the management decided to install a larger engine.

In addition to the usual inspection of boilers, I made a number of inspections for the Workmen's Compensation Board and found the management generally willing to co-operate in the endeavour to prevent accidents.

Trusting this report meets with your approval,

I have, etc.,
J. B. TAIT,
Inspector, District A (North).

J. D. KAY,
A. S. BENNETT,
J. B. TAIT,
Inspectors of Steam-boilers, District A.

Senior Inspector's Report, District B.

VICTORIA, B.C., April 1st, 1921.

John Peck, Esq.,
Chief Inspector of Machinery, New Westminster, B.C.

SIR,—I have the honour to submit the following report for the general work done in this district for the past twelve months:—

During that period engineers' examinations were held monthly in Victoria, tri-monthly in Nanaimo, and as opportunity prevailed at the following places: Prince Rupert, Ocean Falls, Anyox, Prince George, and other points on the Grand Trunk Pacific Railway; also at Masset, on Queen Charlotte Islands, and at Courtenay, V.I.

Two hundred and fifty-three candidates were examined for the various grades of certificates; of those, 175 passed, while seventy-eight failed to secure sufficient marks to pass.

This office received 103 applications for examination besides those sent from head office; eighteen applied for re-examination, out of which total sixty-seven were approved. The examination fees so collected amounted to $207.50.

During the year I was called on to perform some special inspections, for which I received $288.95 from the companies to reimburse the outlay for travelling expenses and time involved.

During the year I covered 6,419 miles, earned $2,875.60, and collected $2,937.50.

Appended is a list of defects found at the various steam plants, giving nature and degree of danger.

Apart from the inspections already mentioned and for which fees were paid, I inspected for the Provincial Government eight steam-boilers of a total horse-power of 1,360, representing $132.85 in fees if same had been collected.

The following work was performed for District D: A large 72-inch by 18-foot boiler was supervised during construction and passed by me, as well as six copper steam-jacketed kettles. For District A I also looked after the workmanship and tested a similar number of copper kettles.

During the past year I made 237 inspections, 240 hydrostatic tests, and 135 visits to steam plants, etc., between the annual inspections.

Fortunately no serious accidents have occurred which require special comment and none causing personal injury have been reported.

On behalf of the Workmen's Compensation Board considerable attention was given to the survey of moving machinery to see that safeguards were provided, thus ensuring the greater safety of the workmen.

In conclusion, I would acknowledge the efficient and careful assistance of my two colleagues in carrying out the inspection-work of this district.

I have, etc.,
S. BAXTER,
Senior Inspector, District B.

ENGINEERS' EXAMINATIONS.

Number of applications for examinations	103
Number of applications for re-examination	18
Number of applications approved	67
Examination fees	$207.50

REMARKS.

Examinations held monthly in Victoria; tri-monthly in Nanaimo; as opportunity prevailed at Prince Rupert, Ocean Falls, Anyox, Hutton, Prince George, and other points on Grand Trunk Pacific Railway; also Masset and Courtenay.

S. BAXTER,
Inspector of Steam-boilers, District B.

Inspector's Report, District B.

VICTORIA, B.C., April 1st, 1921.

John Peck, Esq.,
Chief Inspector of Machinery, New Westminster, B.C.

SIR,—I have the honour to submit my report for the year ending March 31st, 1921.

During the year I inspected steam plants on Vancouver Island, Anyox, Nass River, Prince Rupert, and along the Grand Trunk Pacific Railway, where I found eighteen second-hand boilers which had been imported from other Provinces and were being used for sawmill purposes.

I also made a special visit to Anyox to inspect two B. & W. boilers and collected $128.70 for time and travelling expenses.

Three boilers were condemned due to age and general deterioration, and vertical boiler No. 20335-B.C. was condemned, due to the shell cracking at the edge of the double-riveted longitudinal lap-seam about the water-line, and which gave way under test.

I have also done considerable work for the Workmen's Compensation Board, inspecting plants for "safety devices" and small vertical boilers.

I append herewith a summary of work done, with defects noted, which I trust will meet with your approval.

I have, etc.,
L. DUCKITT,
Inspector, District B.

REMARKS.

Assisted with examinations in Victoria and held examinations in Nanaimo, Anyox, Prince Rupert, and at various points along the Grand Trunk Pacific Railway, details of which will be found in Mr. Baxter's report.

REMARKS.

I inspected one boiler for the Provincial Government; the fees of $5 were not charged.

L. DUCKITT,
Inspector of Steam-boilers, District B.

Inspector's Report, District B.

VICTORIA, B.C., April 1st, 1921.

John Peck, Esq.,
Chief Inspector of Machinery, New Westminster, B.C.

SIR,—I have the honour to submit my report for the year ending March 31st, 1921.

My detailed report indicates that this has been a very busy year. It is to be noted that the major portion of my work was done in the northern part of the Province. In the Queen Charlotte Islands alone I inspected over sixty boilers. Industry is moving northward.

I am sure it would be a wise ruling if all vertical boilers with lap-seams had to have a test-slot cut in the seam. In two instances at least in the past year this precaution has prevented accident.

Some trouble has been experienced with the settings of some of the boilers at the various plants. At Ocean Falls the centre supports of the Badenhausen boilers were very badly damaged by the fire. A sufficient lining of firebrick had not been used.

The plant owned by the Whalen Pulp & Paper Company at Port Alice is, by a close co-operation between the engineering staff and the management, being put on an efficient footing.

It is to be noted that the bigger plants at least are giving close attention to economical steam production by the use of the various necessary apparatus for this purpose.

My monthly reports give a very closely detailed report of the various inspections and also of the arrangements for engineers' examinations which I have conducted or assisted with in Victoria and in the more remote places which our district looks after.

Much time and attention have been devoted to the safeguarding of points which in any way might prove a source of danger, and I venture to think that our efforts along this line are proving of very real worth.

I trust this report will meet with your approval.

I have, etc.,
JOHN CLARK,
Inspector, District B.

S. BAXTER,
L. DUCKITT,
JOHN CLARK,
Inspectors of Steam-boilers, District B.

Inspector's Report, District C.

NELSON, B.C., April 1st, 1921.

John Peck, Esq.,
Chief Inspector of Machinery, New Westminster, B.C.

SIR,—I have the honour to submit my tabulated report for the past year.

The work done has been much the same as in former years, and the defects discovered consisted, for the most part, of broken stays and small cracks on the circumferential seams in the fire-space and also several on the rear heads of return-tubular boilers under the tubes.

One boiler-explosion took place in which the whole crown-sheet of a 60-horse-power locomotive boiler pulled away from all the radial stays. The tube-sheet was also pulled off the top row of tubes, and the furnace-plate at the fire-door end was pulled off the upper row of stays. Although very badly bent down, the plate did not rupture, and only two of the mill crew, who were in the boiler-room at the time, were slightly scalded by the escaping steam.

The investigation showed that one of the rubber rings used as packing on the gauge-glass had been pulled off the glass and had lodged in the lower fitting, where it closed up the opening, causing a false water-level to be shown.

The engineer had also replaced the fusible plug with one having a hole drilled part way through, the hole being parallel and ⅜ inch in diameter. The small end of the hole was only ⅛ inch in diameter, and, as the tin melted out, the sediment on the upper end of the plug followed the melting tin and effectively closed the small opening in the plug. The evidence showed that the sheet had pulled off the stays more or less gradually, the centre row being the first to let go.

I have, etc.,

ANDREW SUTHERLAND,
Inspector, District C.

ANDREW SUTHERLAND,
Inspector of Steam-boilers, District C.

Senior Inspector's Report, District D.

VANCOUVER, B.C., April 1st, 1921.

John Peck, Esq.,
Chief Inspector of Machinery, New Westminster, B.C.

SIR,—I have the honour to submit my annual report for the year ending March 31st, 1921. (*See* tabulated report.)

During the year there has been very little happening outside of ordinary routine in this district; we were fortunate in escaping serious accident. In addition to items mentioned in tabulated report, several inspections were made for the Workmen's Compensation Board, some in company with Mr. Gilmour, of the Board. Two laundry mangles imported from Eastern Canada were condemned after testing, owing to defective material. The work in this district for the first part of fiscal year was rather strenuous owing to being one Inspector short, but this was relieved when Mr. O'Neill was appointed and we were able to handle all the rush without inconvenience to the public.

The business prospects for this year do not appear so good as they did at this time last year, and with present staff I think we can clean up all the work, as we can get started on the logging-donkeys up the Coast and finish before bad weather in the fall, while the other Inspectors take care of the local inspections and engineers' examinations.

I have, etc.,

GEORGE O. MADIGAN,

Senior Inspector, District D.

REMARKS.

During the year most of my time has been occupied in the office, keeping records, attending to correspondence, arranging work for inspectors, and collecting fees.

NOTE.—The sum of $192.80 was collected for work done in this district by Mr. Davidson and credited to him after he had been transferred to New Westminster District.

SUMMARY OF WORK DONE IN DISTRICT D FOR YEAR ENDING MARCH 31ST, 1921.

Number of boiler-plates inspected	27
" boilers built under Inspector's supervision in British Columbia	4
" new boilers inspected built in United States	3
" new boilers inspected (total)	7
" boilers imported from United States (second-hand)	1
" boilers unclassified	1
" inspections, external and internal	11
" visits in addition to inspections	14
" boilers subjected to hydrostatic test	10
" boilers on which pressure was reduced	1
" accidents to engines and boilers	2
" investigations	1
" inspections completed	11
Total horse-power of boilers inspected	413.8
Number of defects observed as per summary	4
Number of defects considered dangerous	1
Inspection fees earned ($207.80 earned by Mr. Davidson and collected by District D)	$127.40
Inspection fees collected, $127.40; total for District D	$12,074.20

GEORGE O. MADIGAN,

Senior Inspector of Steam-boilers, District D.

Inspector's Report, District D.

VANCOUVER, B.C., April 1st, 1921.

John Peck, Esq.,
Chief Inspector of Machinery, New Westminster, B.C.

SIR,—I have pleasure in forwarding you my report concerning the work done by me during the past year.

The majority of my inspections were carried out in logging camps, and which, taken as a whole, were found in a very satisfactory condition, considering the difficulties as to the upkeep of these machines in the woods.

The launch "Adanac" was used for this work, and ran fairly satisfactorily after various new parts were fitted to the engine and placed in charge of an engineer capable of exercising some common-sense; the total distance run by the launch being 2,200 miles.

The enclosed tabulated report will serve to give you an idea as to the extent of my efforts towards ensuring the safety of the public, a perusal of which I trust you will find satisfactory.

I have, etc.,
F. BATH,
Inspector, District D.

REMARKS.

In addition to the above, I inspected twelve boilers for the Workmen's Compensation Board, also various inspections on machinery for the same department.

F. BATH,
Inspector of Steam-boilers, District D.

Inspector's Report, District D.

VANCOUVER, B.C., April 1st, 1921.

John Peck, Esq.,
Chief Inspector of Machinery, New Westminster, B.C.

SIR,—I have the honour to forward the enclosed tabulated statement of inspection-work during the year 1920–21.

It will be noted how the amount of new work has decreased towards the end of the year. There are now signs of revival.

With the exception of a 72 by 18 return-tubular boiler which was damaged through lack of water, nothing out of the ordinary routine came within my observation.

That inspection-work is not without its humorous side was evidenced by my discovering a man two months ago who had the courage to attempt the well-nigh impossible. His task, on which he had faithfully worked for a week, was the truing-up of a 96-inch diameter, 22-inch face cast-iron fly-wheel that had been characteristically warped and twisted in the fire which had destroyed the mill. Already he had broken two spokes, and as his process bid fair to breaking what remained, I advised him to desist.

Trusting the record of work done will have your approval,

I have, etc.
FRED BIGGAM.
Inspector, District D.

F. BIGGAM,
Inspector of Steam-boilers, District D.

Inspector's Report, District D.

VANCOUVER, B.C., April 1st, 1921.

John Peck, Esq.,
Chief Inspector of Machinery, New Westminster, B.C.

SIR,—Enclosed herewith I beg to submit my report for year ending March 31st, 1921, with statements of inspections carried out and defects observed.

With reference to the defects, I wish to say that the features were the cases of "safety-valves inoperative" and "shell-plates of boilers cracked." The former were confined to steam plants of low power operated within the jurisdiction of the "Workmen's Compensation Act," and also one heating plant. In each instance the safety-valve had been securely fastened down to prevent its normal functioning. It is perhaps as well that authority to inspect low horse-power boilers exists, since from the foregoing and similar instances which come to light it would seem that boilers of this class can also become potential sources of danger. The cracks in shell-plate mentioned were found adjacent to stop-valve openings which had been punched out. The investigation taken at your suggestion disclosed one more case, and indicates that the cause is related to the extra-heavy cast-iron flanged nozzle, frequently riveted to comparatively thin shell-plates. In both cases a heavy pipe was also attached, and it would seem that the stresses set up in the shell-plate by the pipe-line and the over-rigid nozzle produced the condition. It is satisfactory to note that late regulations tend towards the elimination of such rigidity.

Incidents of the route were the enrolment of a lady in the ranks of the licensed logging engineers, and also the occasional requests by steam-users for assistance of a technical character other than that provided by boiler inspections.

I have, etc.;
JOHN O'NEILL,
Inspector, District D.
